How to buy COMB tokens

A step-by-step guide.

There are 9 easy steps to buy COMB token using a Metamask wallet;

Step 1: Add Avalanche Network to your Metamask wallet

Step 2: Add Fantom Opera Network to your Metamask wallet

Step 3: Add COMB token to Metamask

Step 4: Add AVAX token to your Fantom Opera Network on Metamask

Step 5: Buy AVAX on Exchange & Send to Metamask wallet

Step 6: Bridge AVAX from Avalanche Network to Fantom Opera Network on Metamask

Step 7: Get some FTM for fees

Step 8: Swap AVAX for FTM

Step 9: Swap FTM for COMB

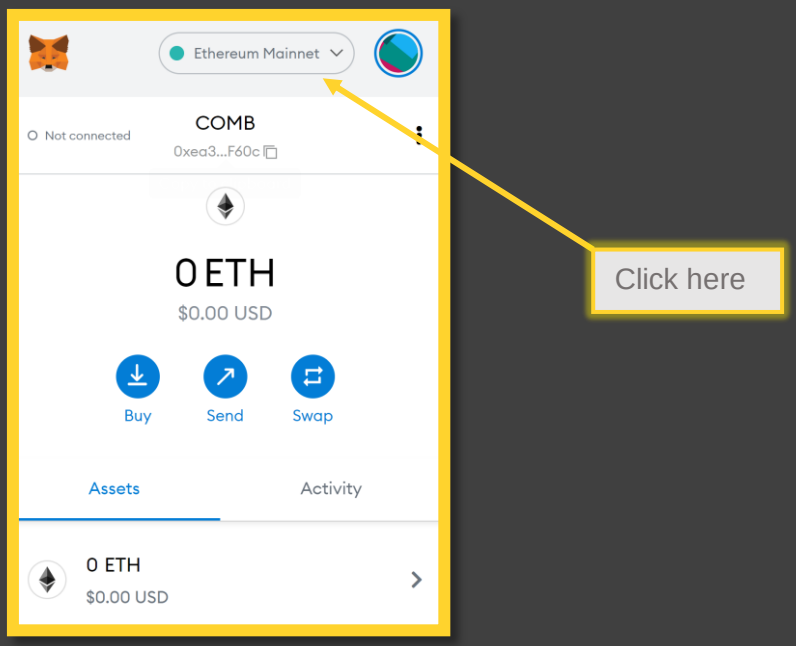
The remainder of this document walks you through the above steps in more detail.
You can also click on any line above to jump directly to that step.

Note: this guide was written at a time when exchanges were not allowing FTM withdrawals, so it is assumed you will need to buy AVAX and then convert it to FTM in order to buy COMB

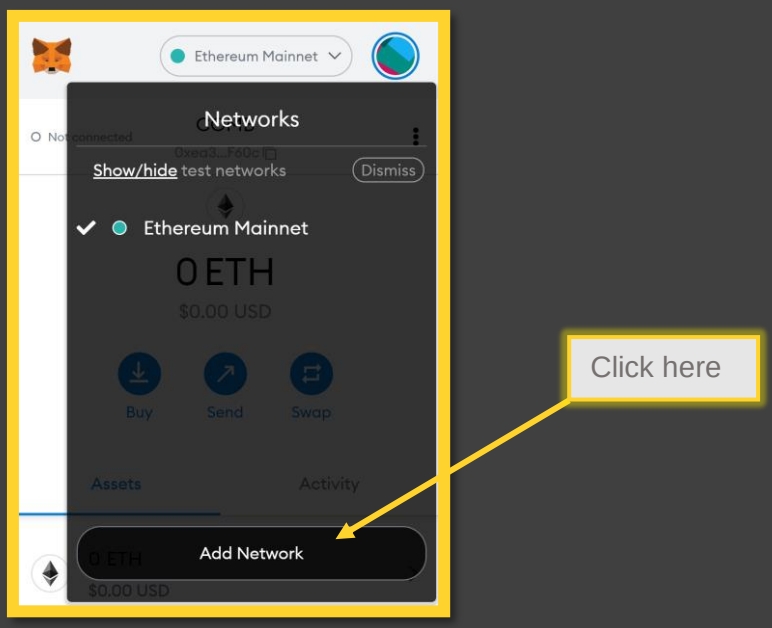
Step 1: Add Avalanche Network to your MetaMask wallet

The top line of your Metamask shows the network you are connected to.

Click on this line to display the current networks already setup for your wallet:



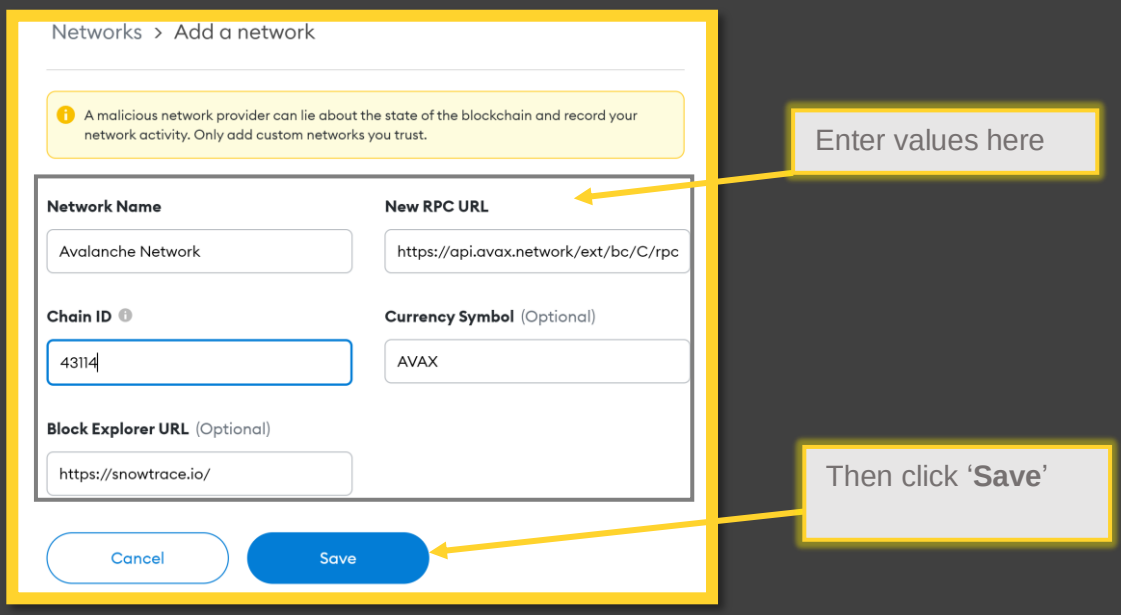
When the Network display appears, click the 'Add Network' option at the bottom:



A network setup screen appears for you to add the network information.

Copy and paste the following information into the boxes as shown below:

Network Name: Avalanche Network
New RPC URL: https://api.avax.network/ext/bc/C/rpc
ChainID: 43114
Symbol: AVAX
Explorer: https://snowtrace.io/

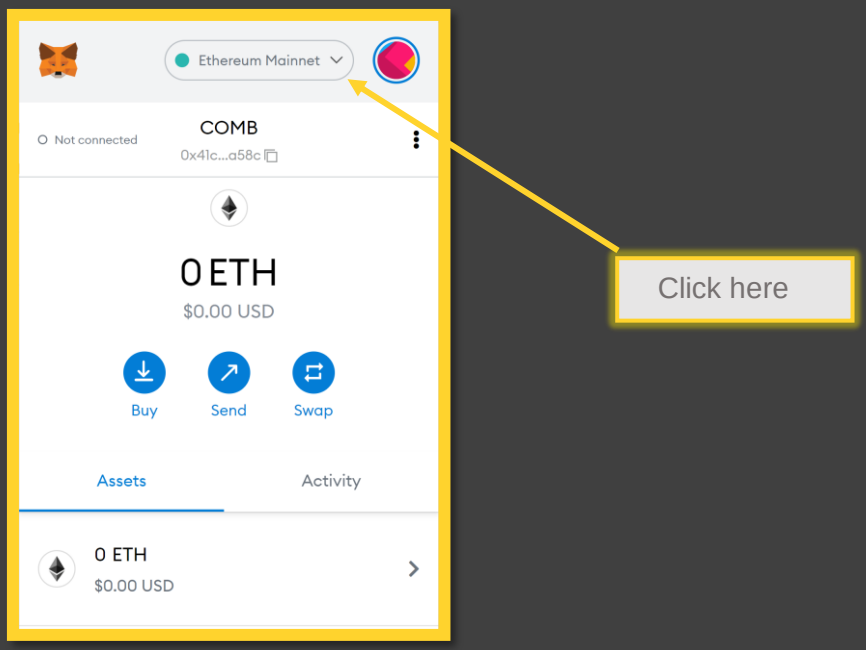


Then click the 'Save' button to save the settings and your Avax network is ready to go.

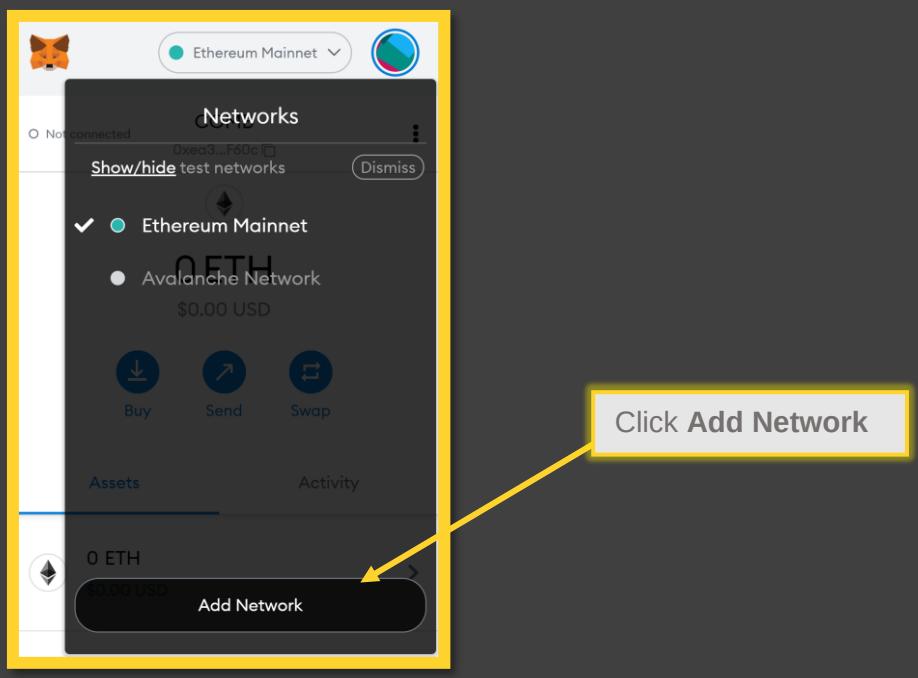
Step 2: Add Fantom Opera Network to your MetaMask wallet

The top line of your Metamask shows the network you are connected to.

Click on this line to display the current networks already setup for your wallet:



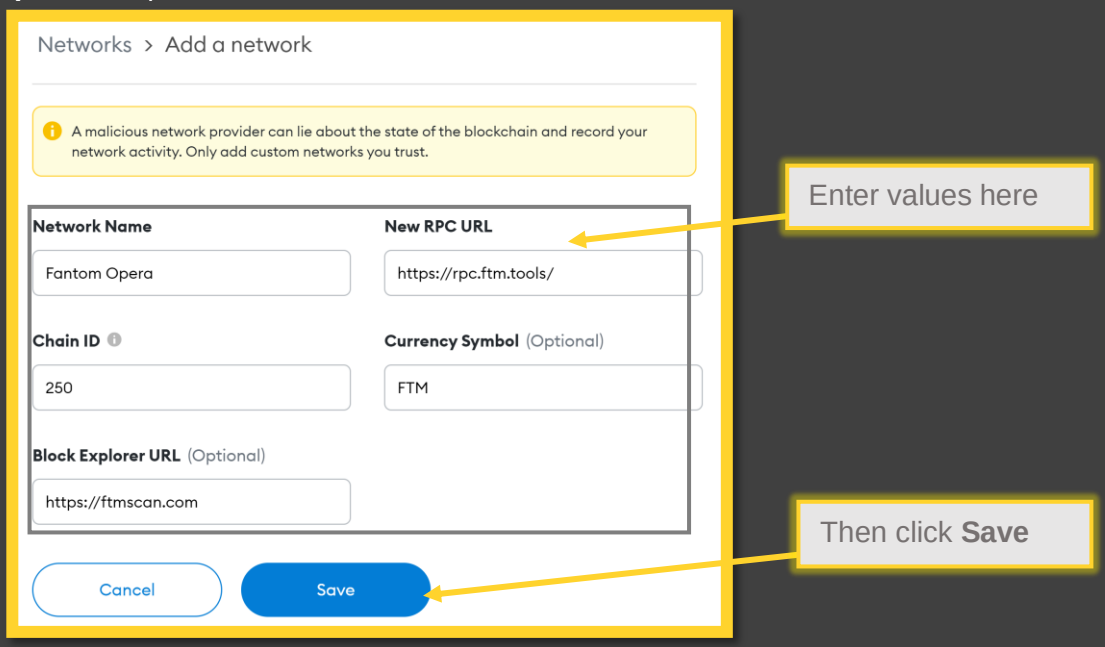
When the Network display appears, click the 'Add Network' option at the bottom:



A network setup screen appears for you to add the network information.

Copy and paste the following information into the boxes as shown below:

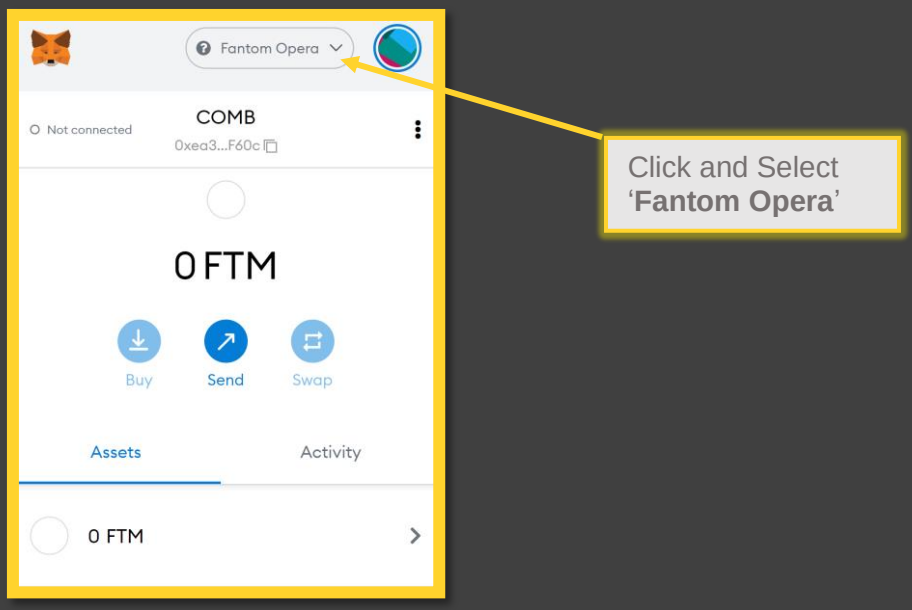
Network Name: Fantom Opera
New RPC URL: https://rpc.ftm.tools/
ChainID: 250
Symbol: FTM
Explorer: https://ftmscan.com



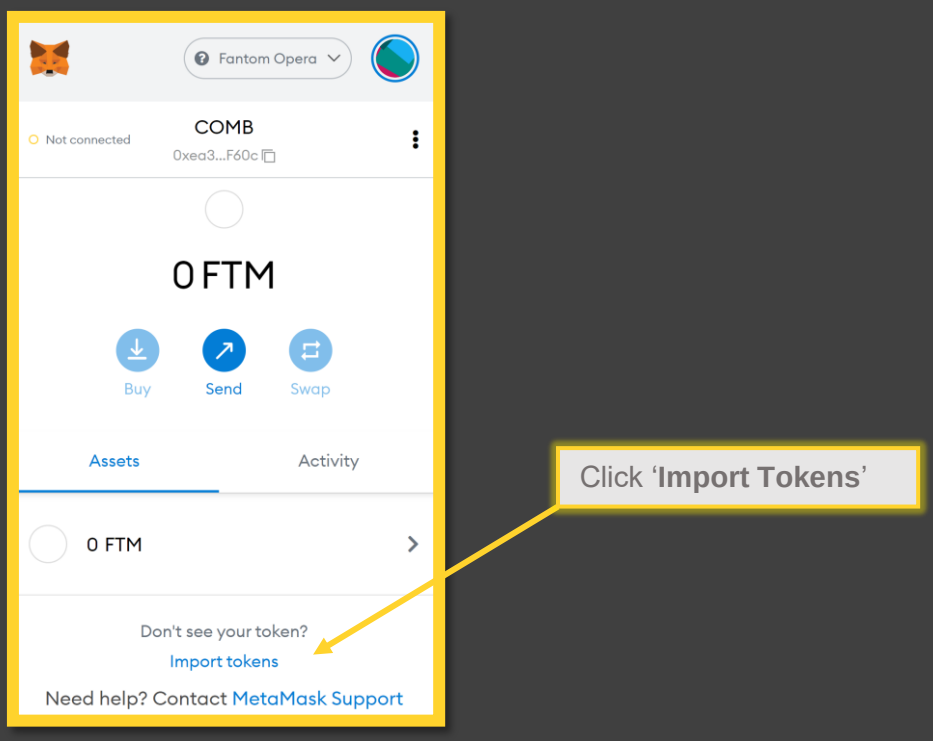
Then click the 'Save' button to save the settings and your Fantom network is ready to go.

Step 3: Add COMB token to MetaMask

Make sure your MetaMask is connected to the FTM network (previous step)

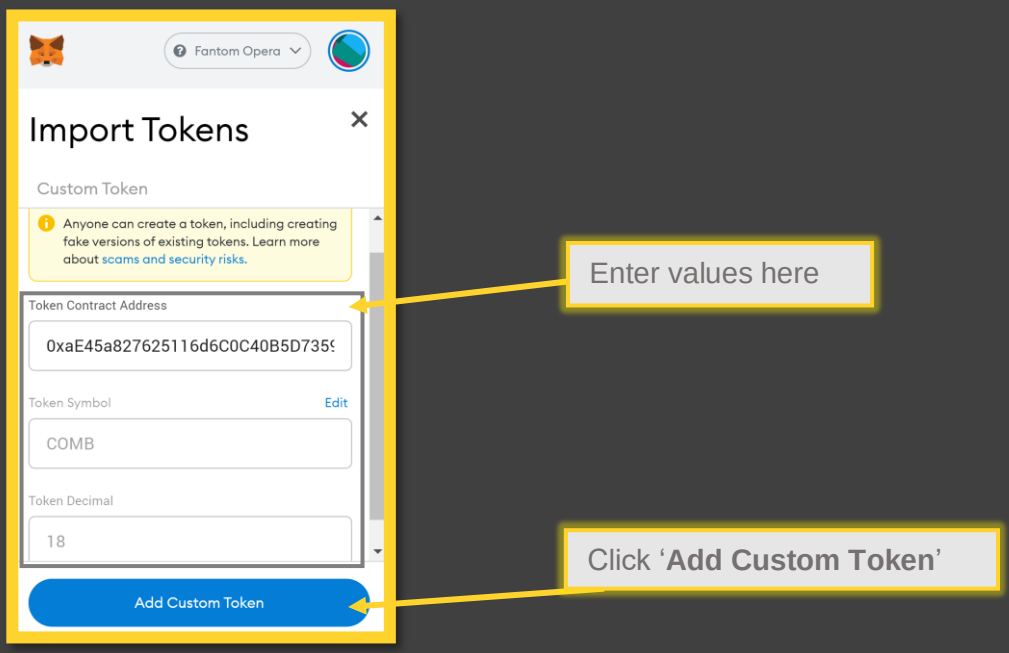


Click on Import tokens:

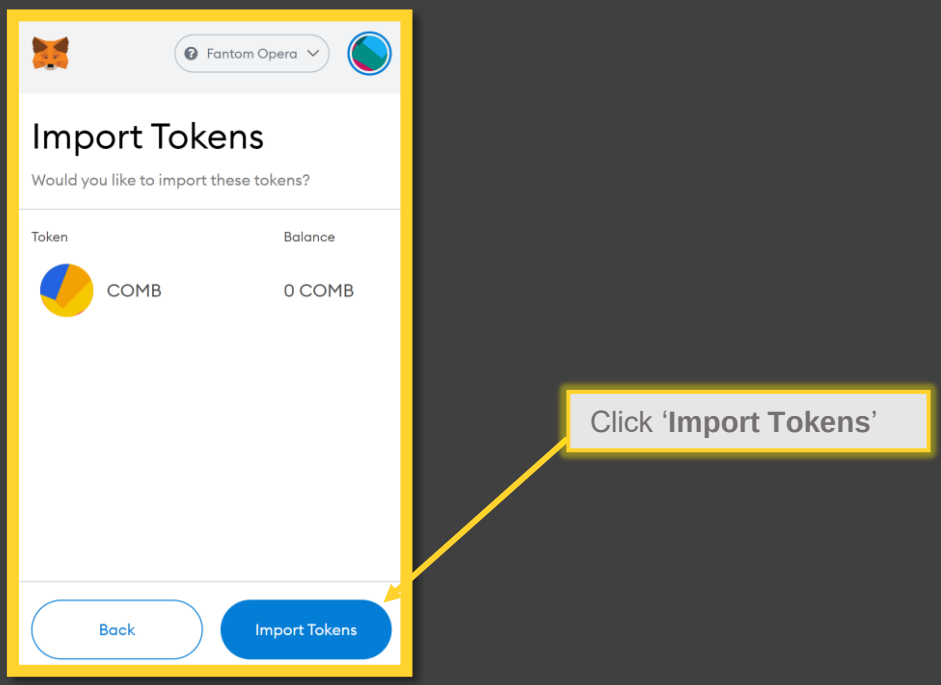


Copy and paste the Contract address, symbol and decimals from the text below into the screen fields as shown on the screenshot and then click **Add Custom Token**

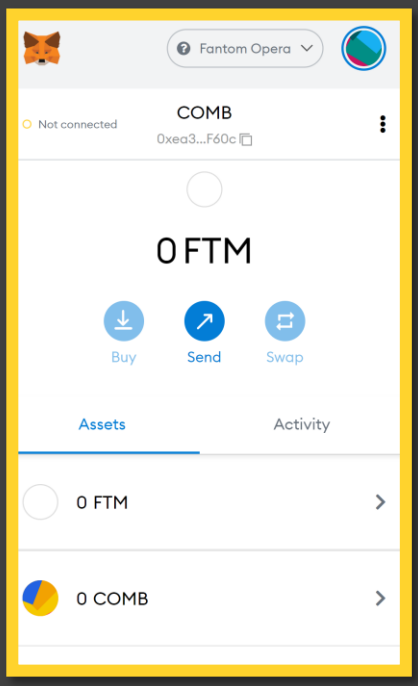
Contract address: 0xaE45a827625116d6C0C40B5D7359EcF68F8e9AFD
Token Symbol: COMB
Decimals: 18



When you see the Comb token showing as per the screen below, click the **Import Tokens** button

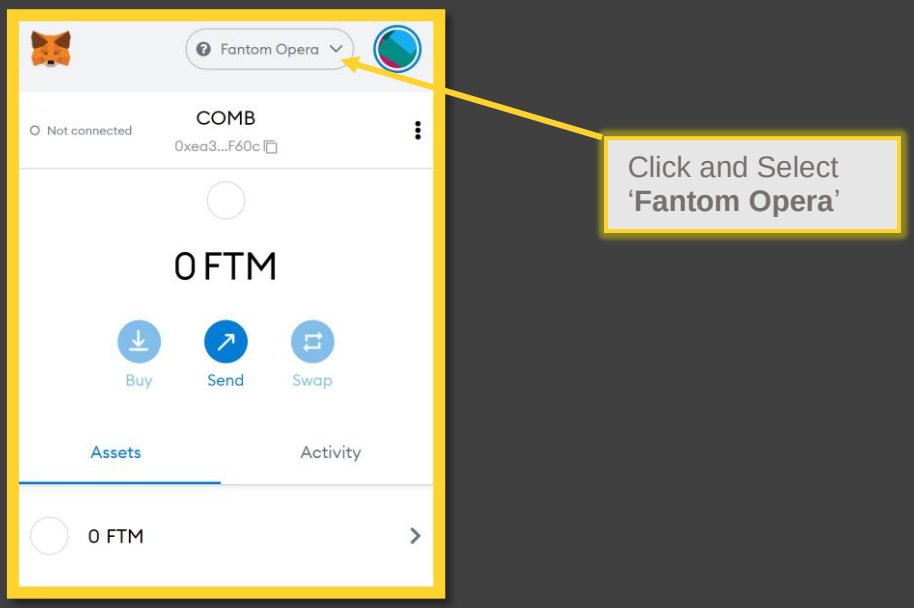


If your COMB token has added successfully, you should now see it appearing in your wallet token list with a quantity of zero:

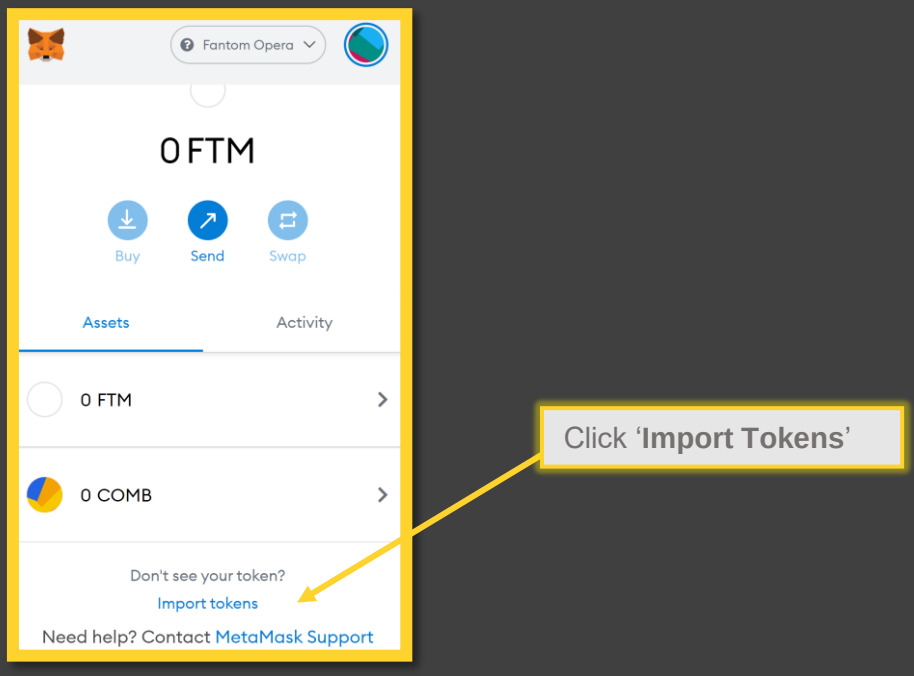


Step 4: Add AVAX coin to your Fantom Opera Network on MetaMask

Make sure your MetaMask is connected to the FTM network (previous step)

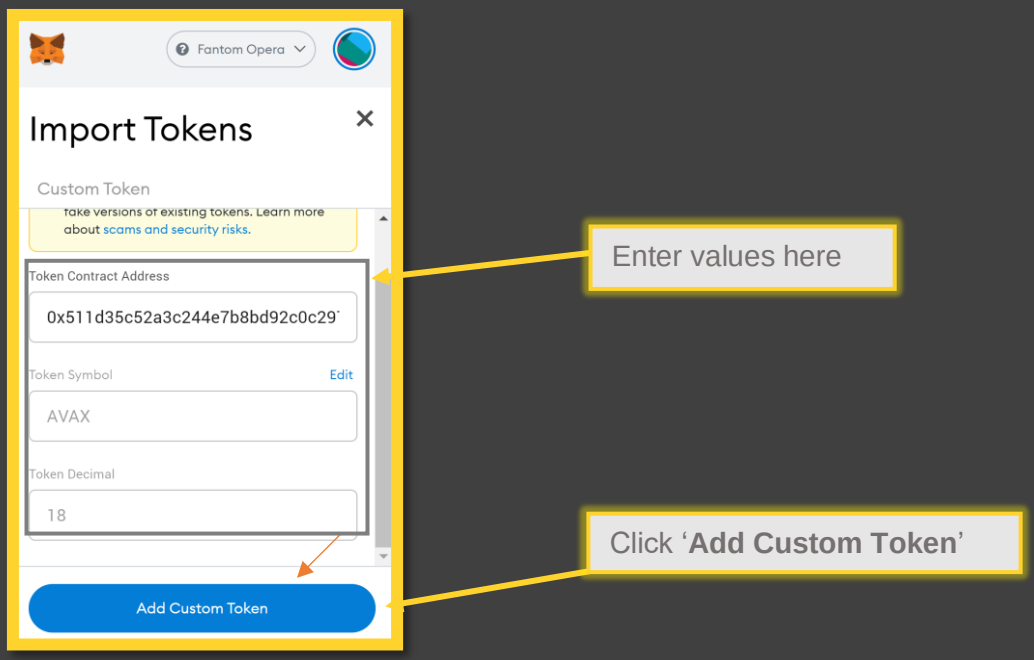


Click on Import tokens:

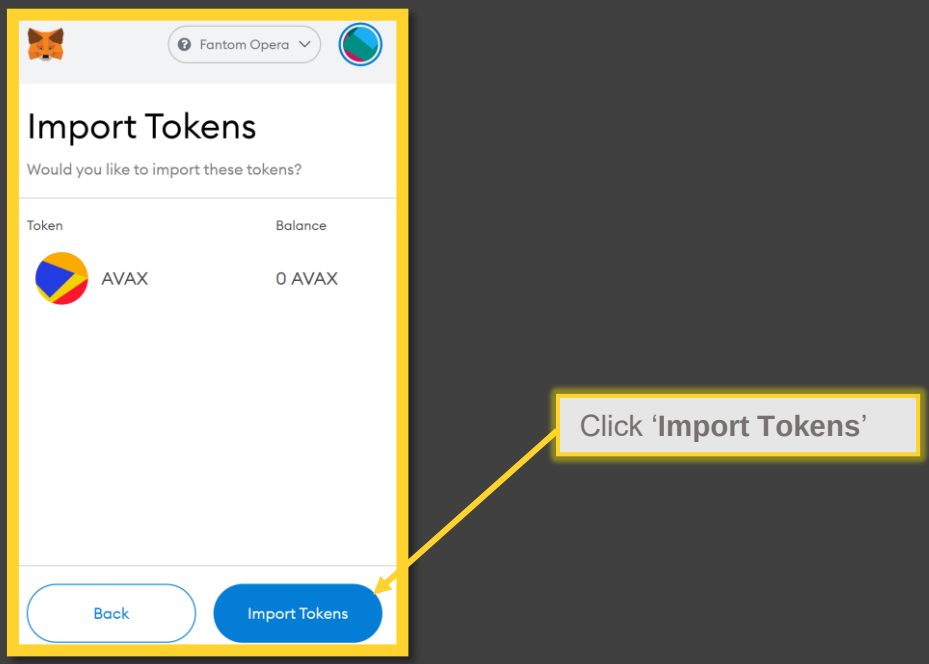


Copy and paste the Contract address, symbol and decimals from the text below into the screen fields as shown on the screenshot below and then click **Add Custom Token**

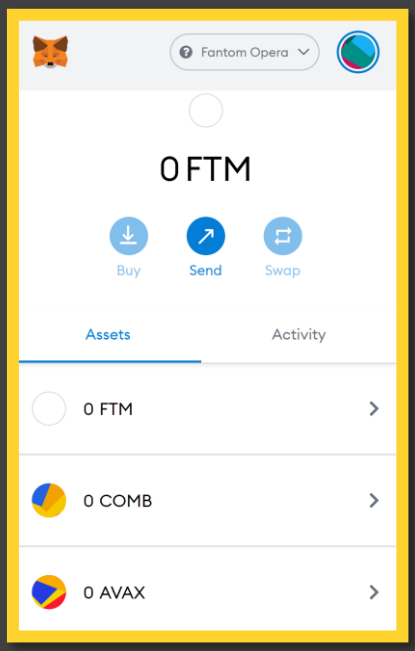
Contract address: 0x511d35c52a3c244e7b8bd92c0c297755fbd89212
Token Symbol: AVAX
Decimals: 18



When you see the Comb token showing as per the screen below, click the **Import Tokens** button



If your Avax token has added successfully, you should now see it appearing in your wallet token list with a quantity of zero:



Fantom Opera
0 FTM
Buy
Send
Swap
Assets
Activity
0 FTM
0 COMB
0 AVAX

Step 5: Buy AVAX on Exchange & Send to MetaMask wallet

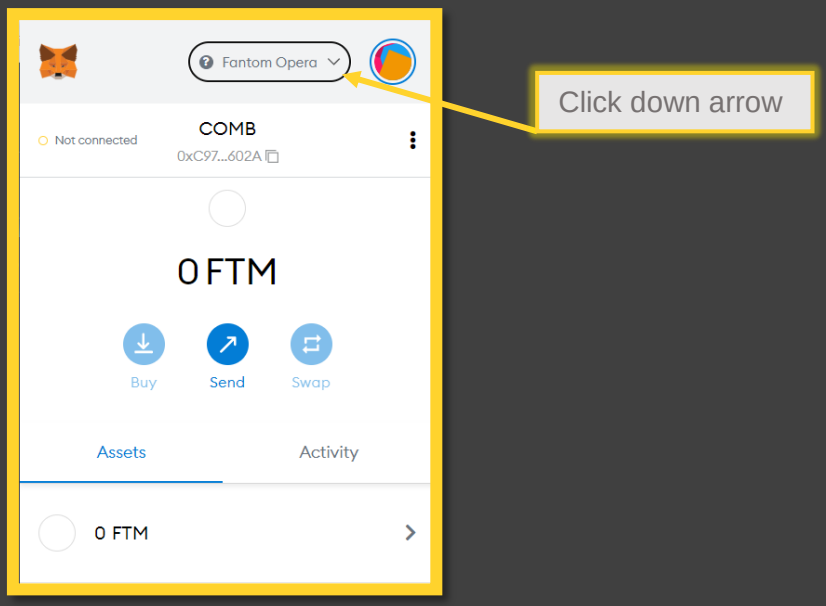
This guide assumes you already know how to buy a token on an exchange.

The most important thing to check BEFORE buying any AVAX on an exchange is to make sure it can be withdrawn using AVAX C-Chain network, not the Ethereum network (ERC-20) or you will pay excessive withdrawal (gas) fees. KuCoin is one exchange that offers withdrawals on the AVAX C-Chain and therefore is used in this example.

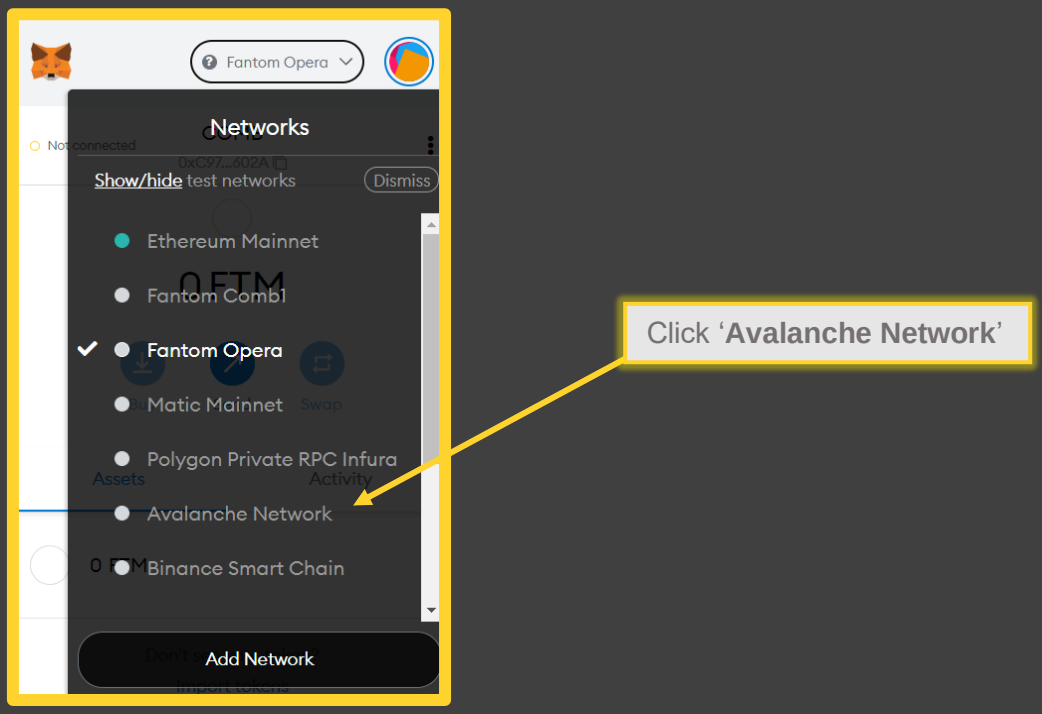
Purchase enough $ worth of AVAX to convert to the required number of COMB you want to ultimately buy, plus a little to cover any fees (required for exchange withdrawal and bridging step 0.02 should be ample for KuCoin).

Before you commence your withdrawal, you need to change your Metamask wallet to Avalanche exchange so that you will see your AVAX arrive once your withdrawal is complete.

To do this, click the **Fantom Opera** box at the top of your Metamask screen:

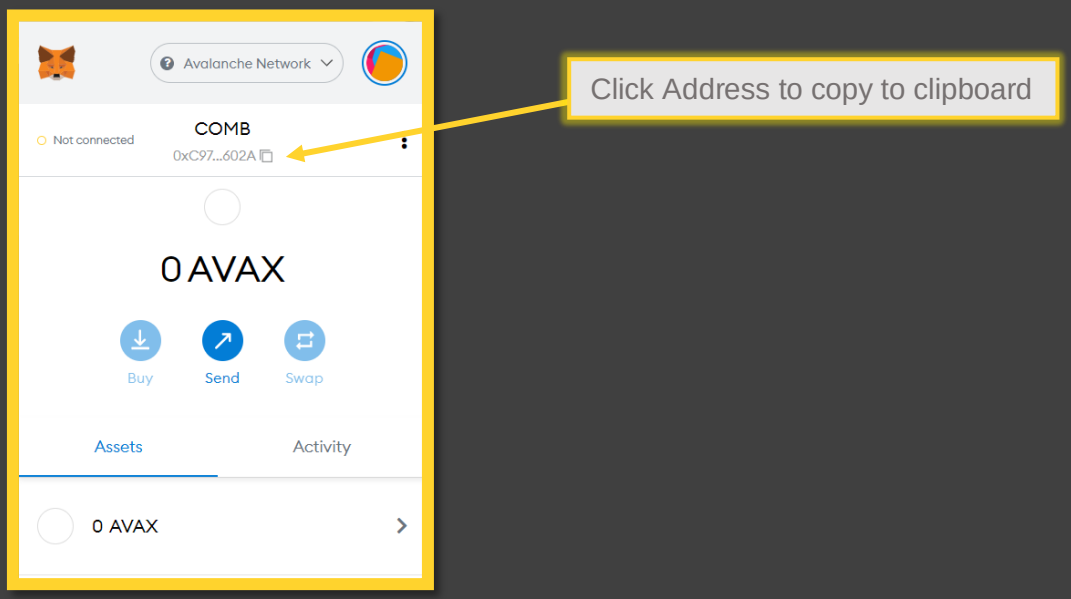


Then click the Avalanche Network from the list of network options that show up (note: you may not have as many options as shown in this example but you WILL have Avalanche if you completed Step 1 of this guide correctly):



You should see that you have 0 Avax now in your wallet and the top line shows **Avalanche Network**.

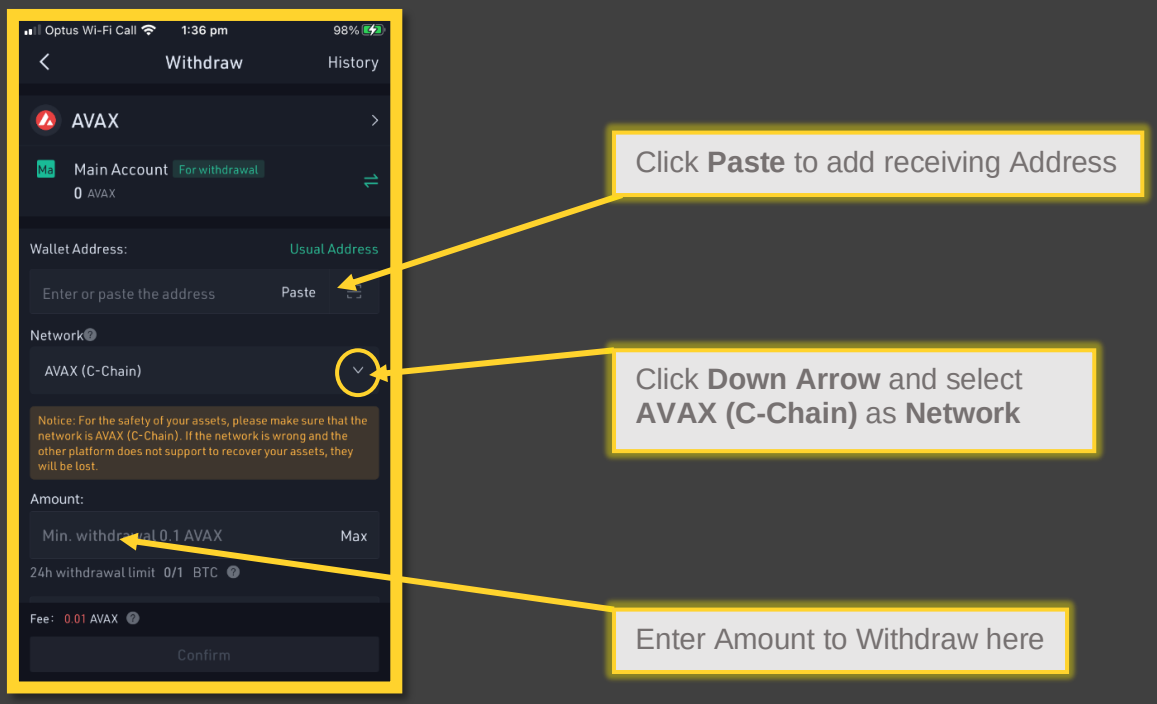
Click the address of your Metamask wallet to copy it to your clipboard (this is the address you will send your Avax to when you withdraw from the exchange):



Paste your Metamask address into the 'Wallet Address' section of the exchange withdrawal screen by clicking the Paste option.

Make sure you select the Network setting as Avax C-Chain as shown below on a KuCoin withdrawal screen below.

Select the Amount of Avax you want to withdraw, then proceed with withdrawal completing any authenticator steps that you exchange requires



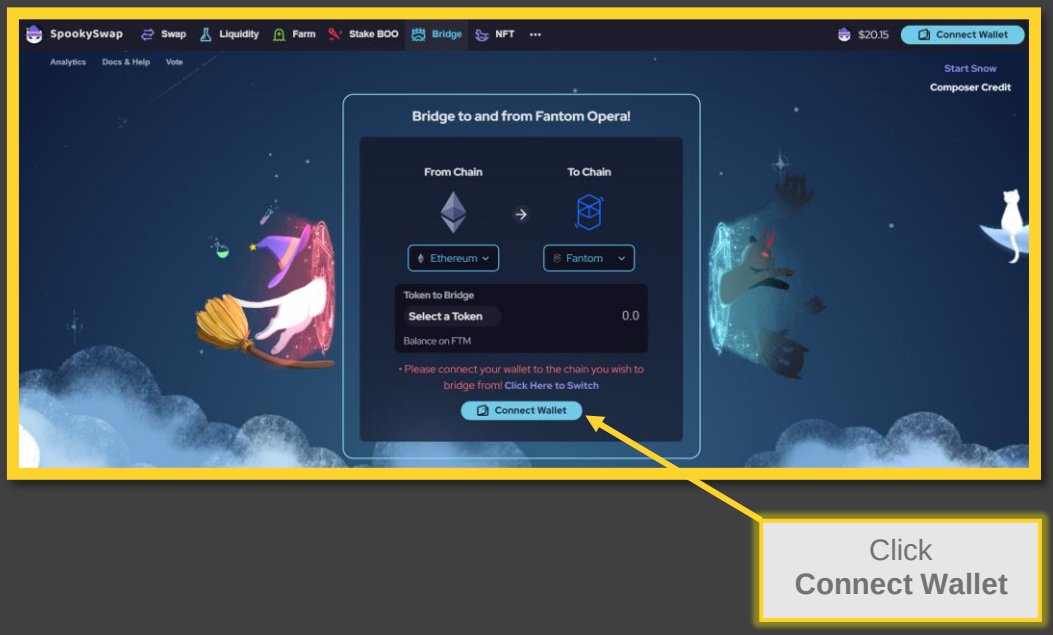
Wait for your AVAX to appear in your wallet before continuing with the next step (can take 20-30 minutes depending on network conditions)

Step 6: Bridge AVAX from Avalanche Network to Fantom Opera Network on Metamask

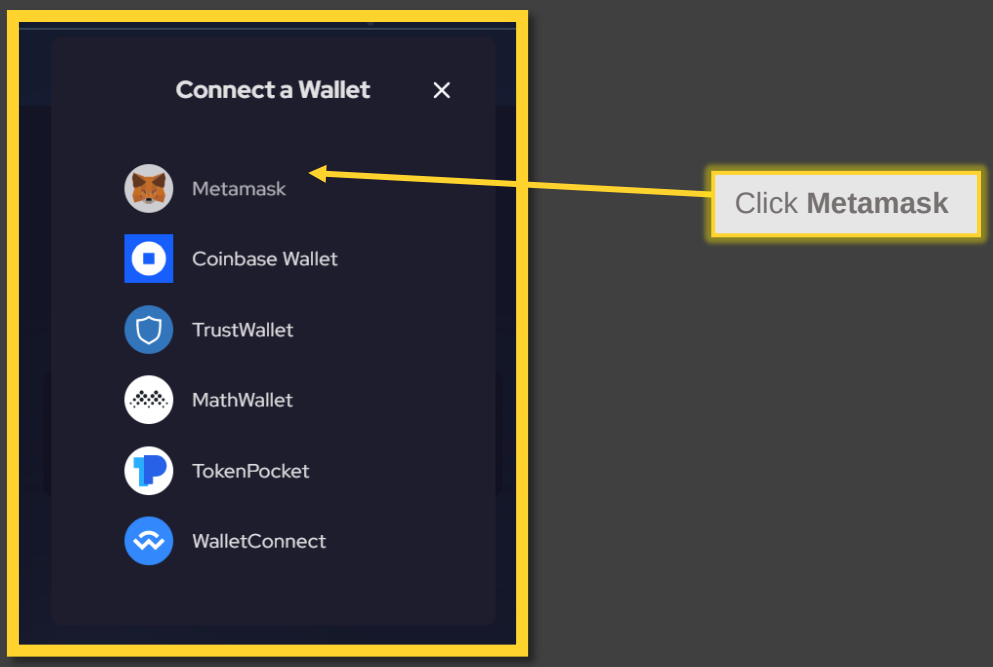
When you receive AVAX in your MetaMask Avalanche Network wallet, it will be on the Avalanche network because this is the 'native' network for AVAX. Bridging allows us to create 'wrapped' AVAX on the FTM network which means it can be recognised and used to swap tokens on the FTM network. To do this, we use a bridging website such as spookyswap.

In your website browser, go to https://spookyswap.finance/bridge

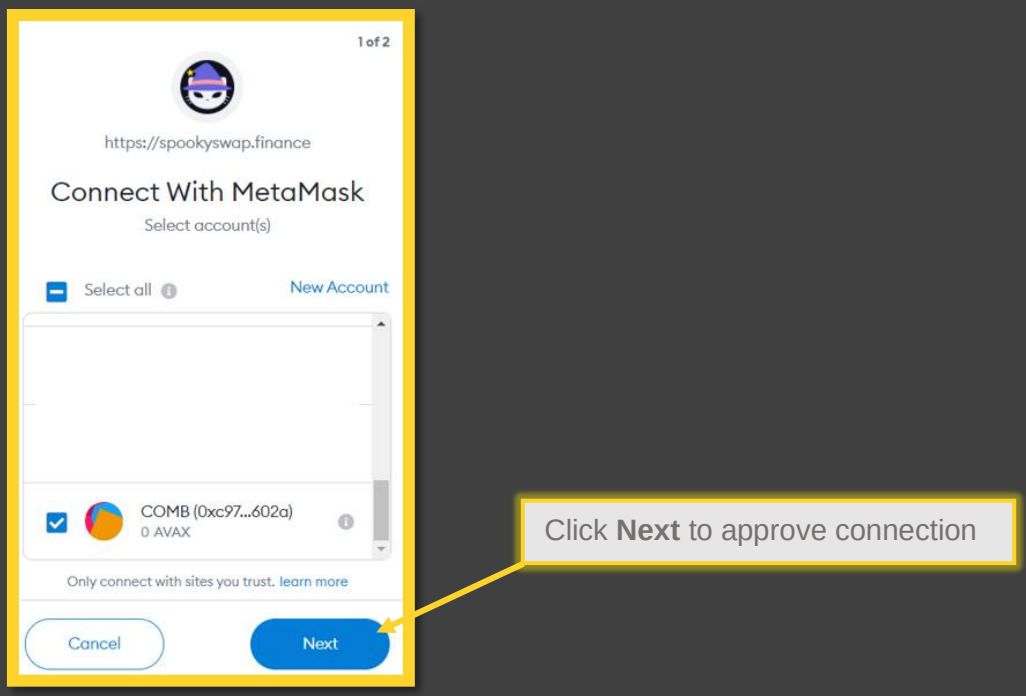
Click **Connect Wallet** to connect the site to your wallet:



Then select **Metamask** on **Connect Wallet** choices:

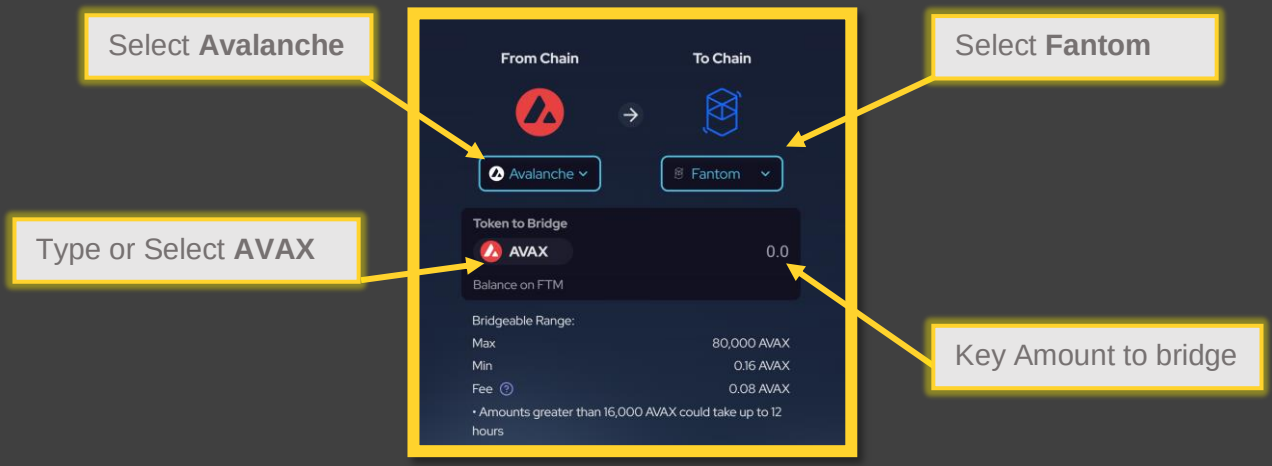


Once you click Metamask on the previous screen, open your Metamask wallet and approve the connection by clicking Next as shown below:



On the SpookySwap window, Input the bridge information as follows (show in screenshot below):

- Select 'Avalanche' in the 'From Chain' and 'Fantom' in the 'To Chain'.
- Type or select AVAX as the Token to Bridge
- Choose the amount of AVAX (usually choose the max allowed),



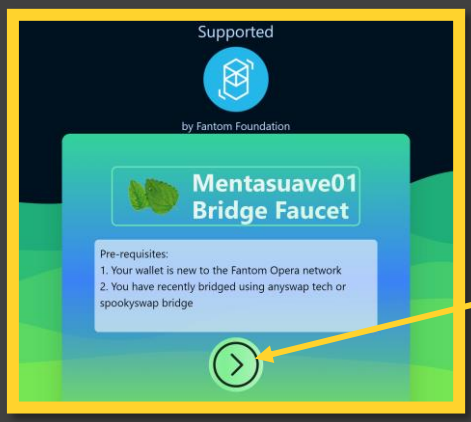
Once values are input, click **Bridge token**, and approve bridging in your wallet (on your Metamask screen).

Step 7: Get some FTM for fees

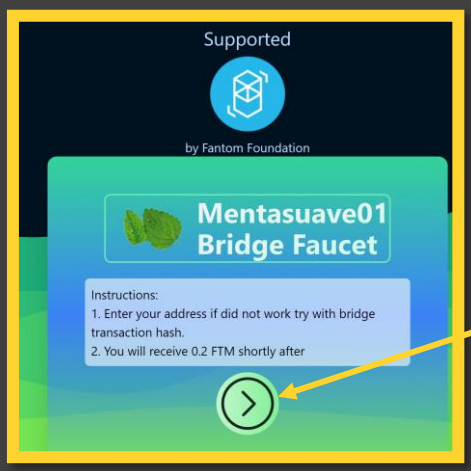
You will be transacting within the Fantom network for the remaining steps. All transactions within any network require fees to be paid in that networks' native token. Therefore, we will need a small amount on Fantom (FTM) for fees before we can proceed any further. A Fantom faucet gives us small amounts of FTM for fees at no charge.

A fantom faucet can be accessed by going to https://www.mentasuave01-tools.com/ in your brower and following the steps below:

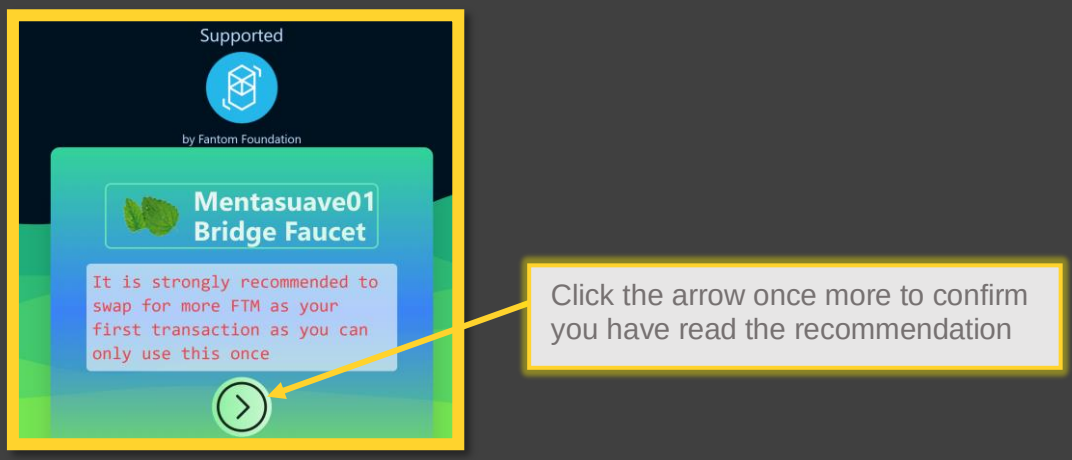
Click the arrow



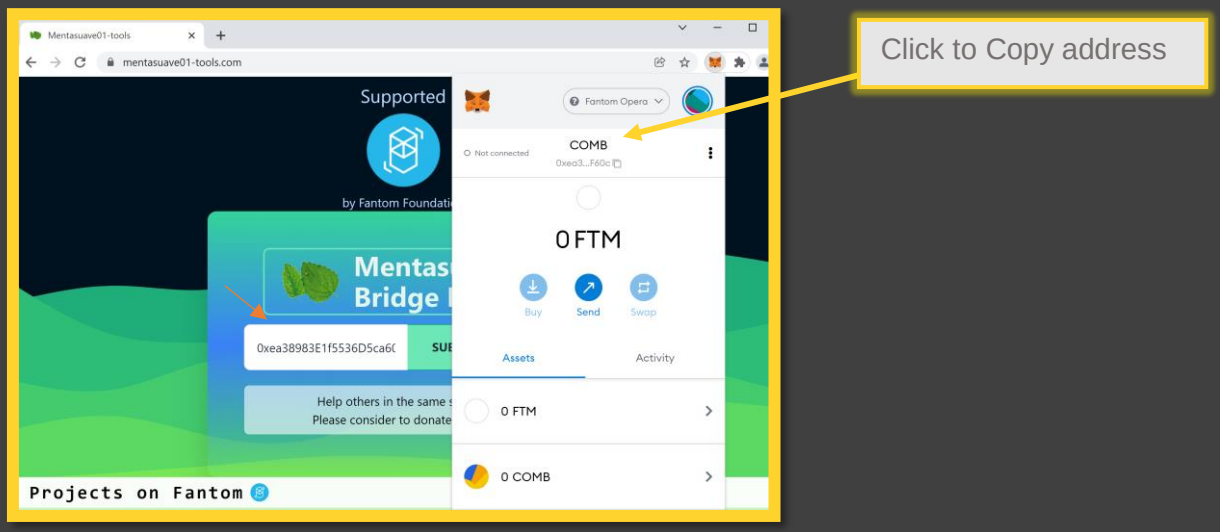
Click the arrow again to confirm you have read the pre-requisites



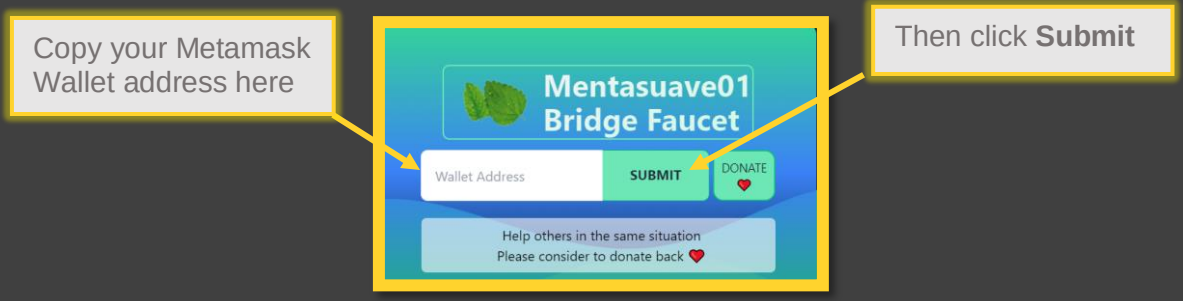
Click the arrow once more to confirm you have read the instructions



Once it asks for your wallet, go back to your Metamask and click the "Copy" symbol to get your receiving address for the free FTM



Paste your Metamask Wallet address and click **Submit**

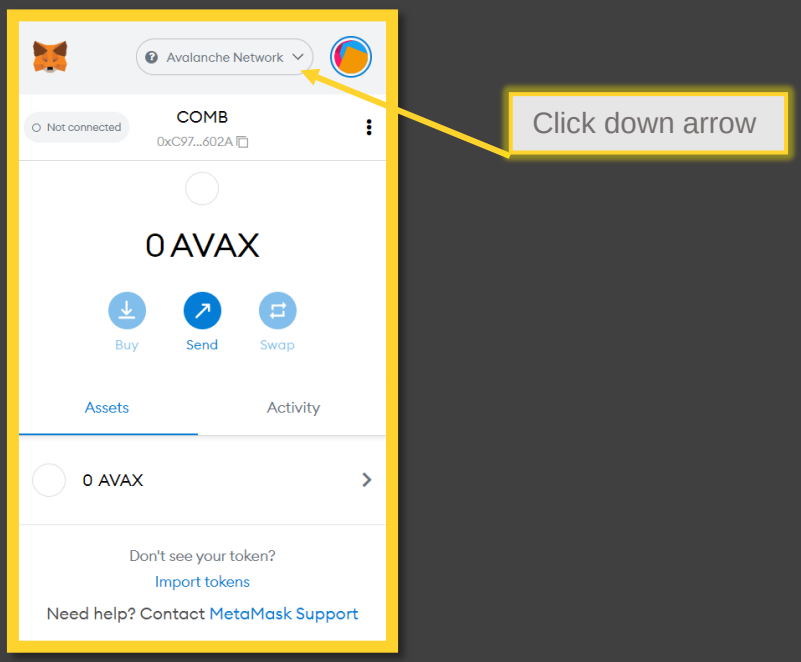


If the faucet was successful, you will receive a message saying '**Bridge was successful'**

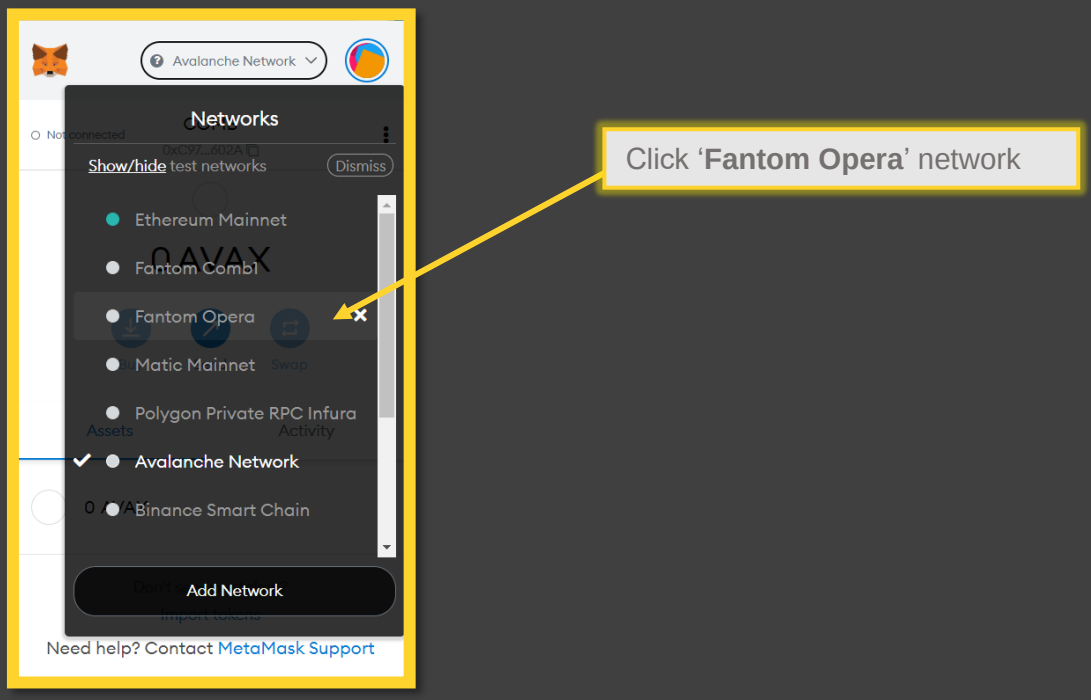
Step 8: Swap AVAX for FTM

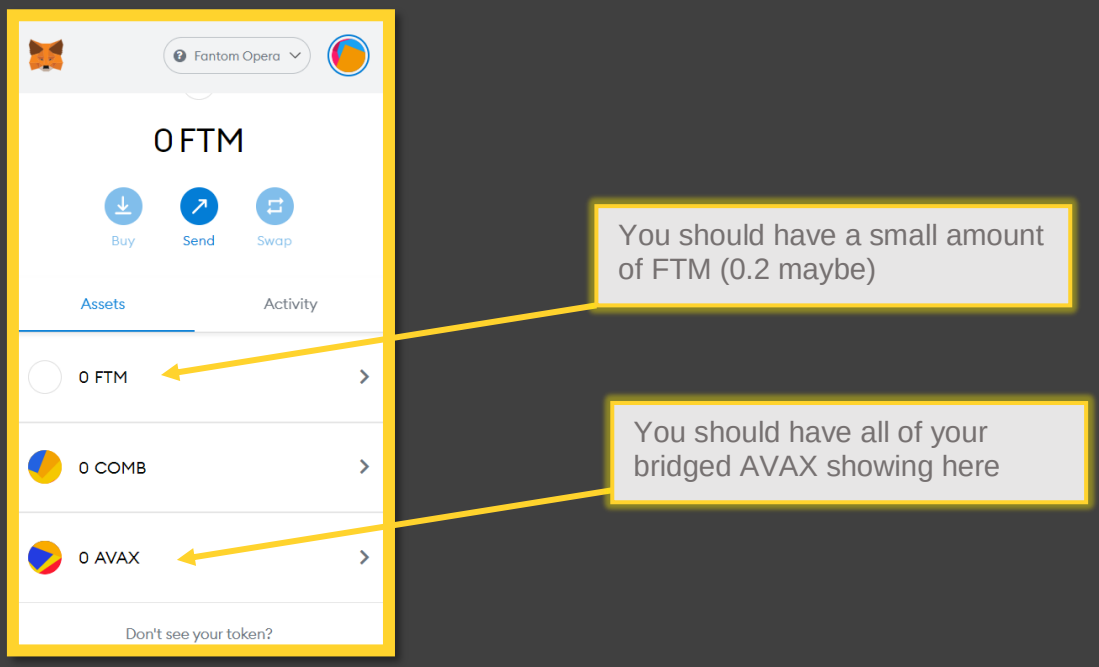
At this point, you should now have a small amount of FTM and all of your AVAX showing on the Fantom Network in your Metamask wallet.

To confirm this, change your Metamask wallet back to the Fantom Network:

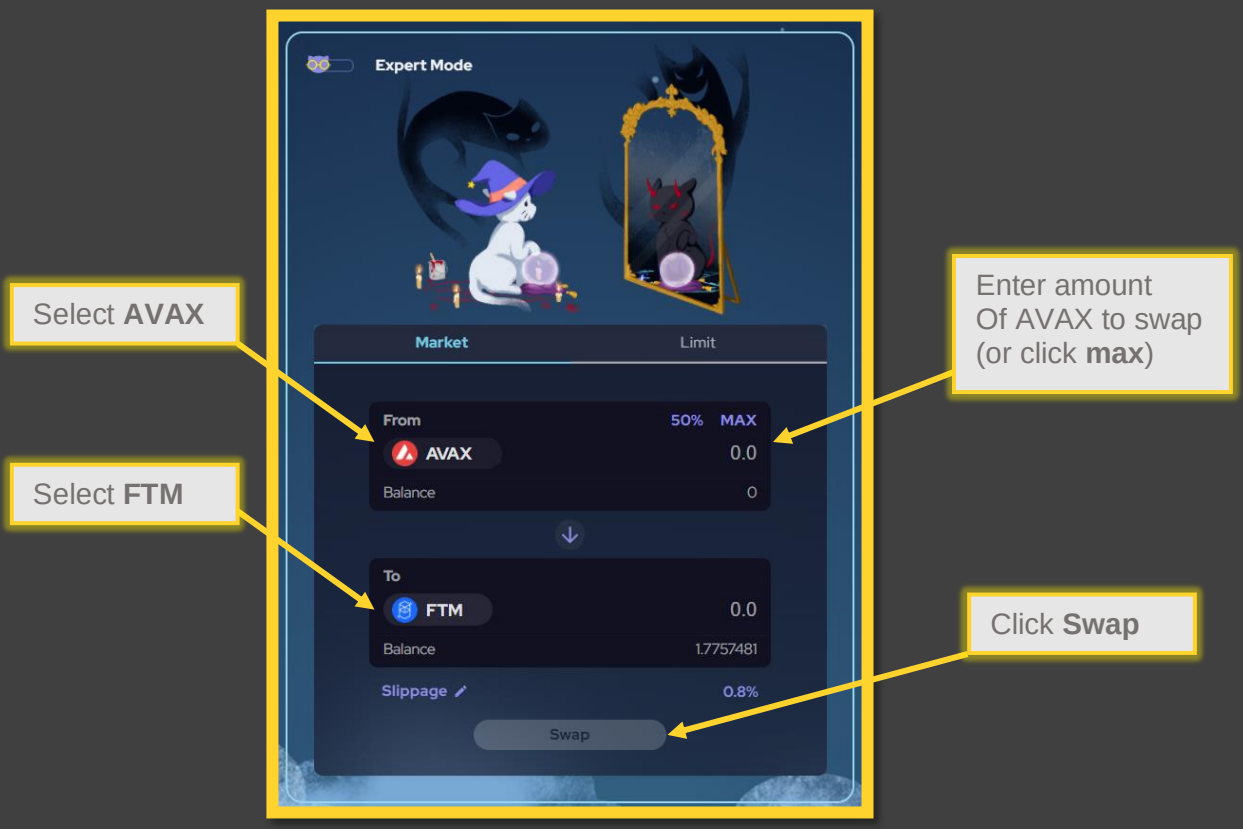


Then click the Fantom Opera Network from the list of network options that show up (note: you may not have as many options as shown in this example but you WILL have Fantom Opera if you completed Step 2 of this guide correctly):





Once you have confirmed you have the required token amounts, go to https://spookyswap.finance/swap and swap AVAX for FTM



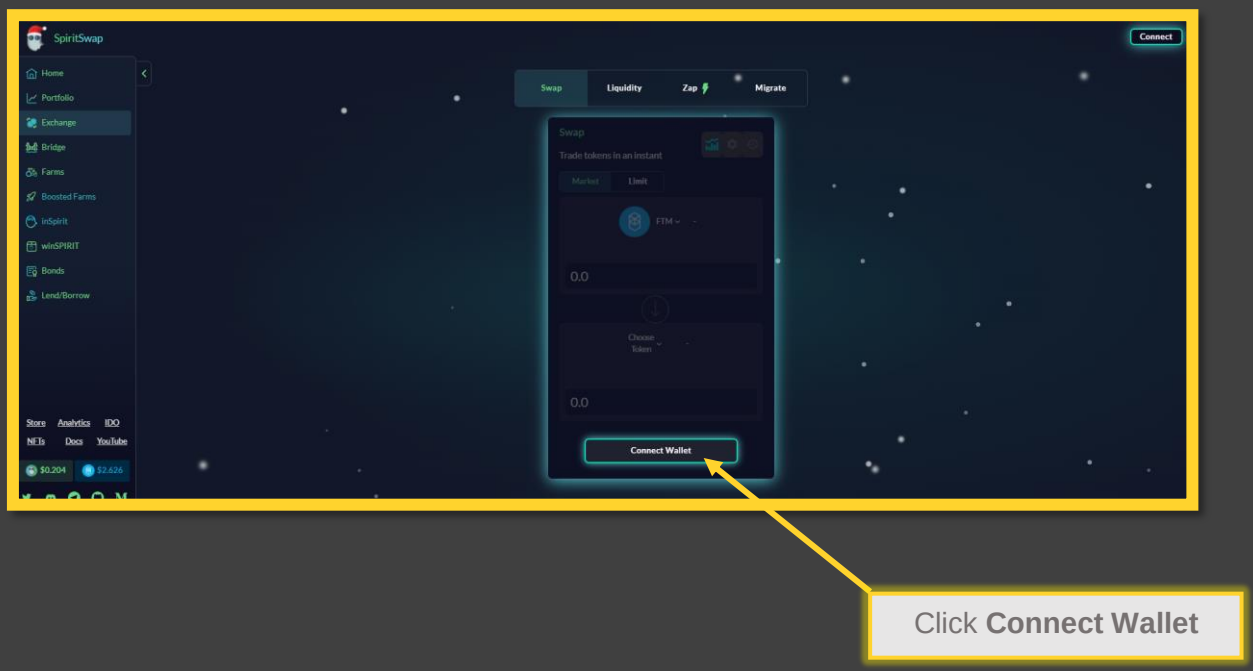
Once the above entries are made, click the **Swap** button and Approve the transaction in your Metamask wallet

Step 9: Swap FTM for COMB

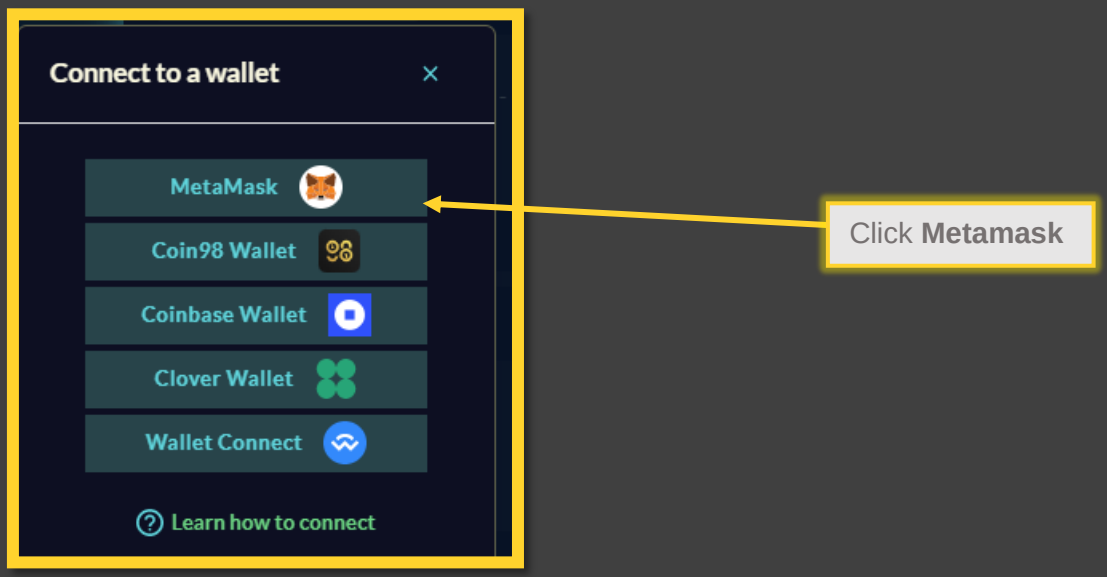
Once you receive your FTM tokens in your Metamask wallet (on Fantom Opera Network), you are finally ready to swap FTM for COMB.

In your website browser, go to https://swap.spiritswap.finance/#/exchange/swap

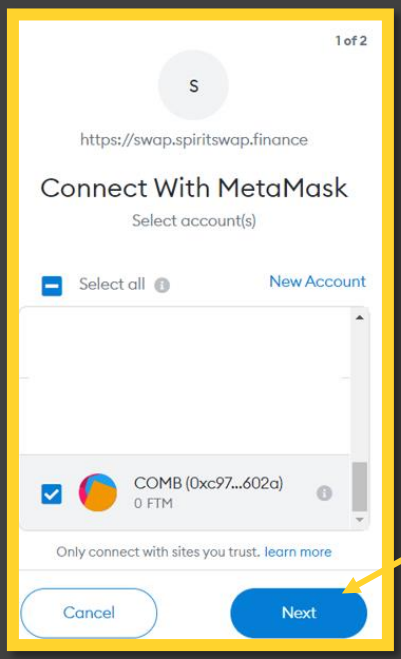
Click **Connect Wallet** to connect the site to your wallet:



Then select **Metamask** on **Connect Wallet** choices:



Once you click Metamask on the previous screen, open your Metamask wallet and approve the connection by clicking Next as shown below:

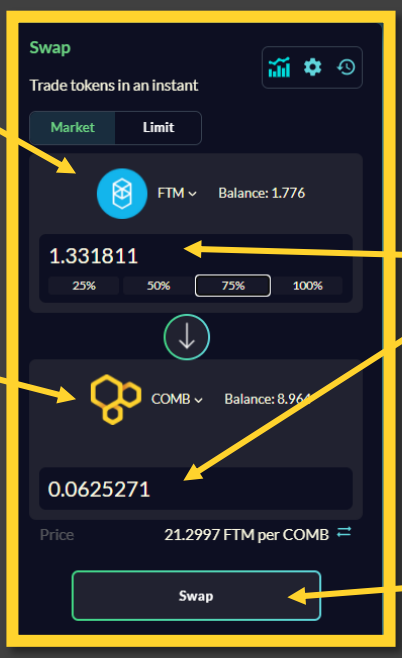


Click **Next** to approve connection

Select FTM on the left/top (token to be swapped) and COMB on the right/bottom (token you are swapping into)

Enter <u>either</u> the qty of COMB you want to receive, <u>or</u> the qty of FTM you want to exchange.

Click the Swap Button then approve in MetaMask *(NOTE: Leave a small amount of FTM in your wallet (1-2 FTM) to cover future fees)*



Select **FTM** to swap **from**

Select **COMB** to swap **to**

Enter Qty in ONE of these only (the other will default)

Click **Swap** once ready to proceed

Congratulations!

You have successfully purchased COMB and are ready to setup a node!
