

How to buy **COMB** tokens

A step-by-step guide.

There are 9 easy steps to buy COMB token using a Metamask wallet;

[Step 1: Add Avalanche Network to your Metamask wallet](#)

[Step 2: Add Fantom Opera Network to your Metamask wallet](#)

[Step 3: Add COMB token to Metamask](#)

[Step 4: Add AVAX token to your Fantom Opera Network on Metamask](#)

[Step 5: Buy AVAX on Exchange & Send to Metamask wallet](#)

[Step 6: Bridge AVAX from Avalanche Network to Fantom Opera Network on Metamask](#)

[Step 7: Get some FTM for fees](#)

[Step 8: Swap AVAX for FTM](#)

[Step 9: Swap FTM for COMB](#)

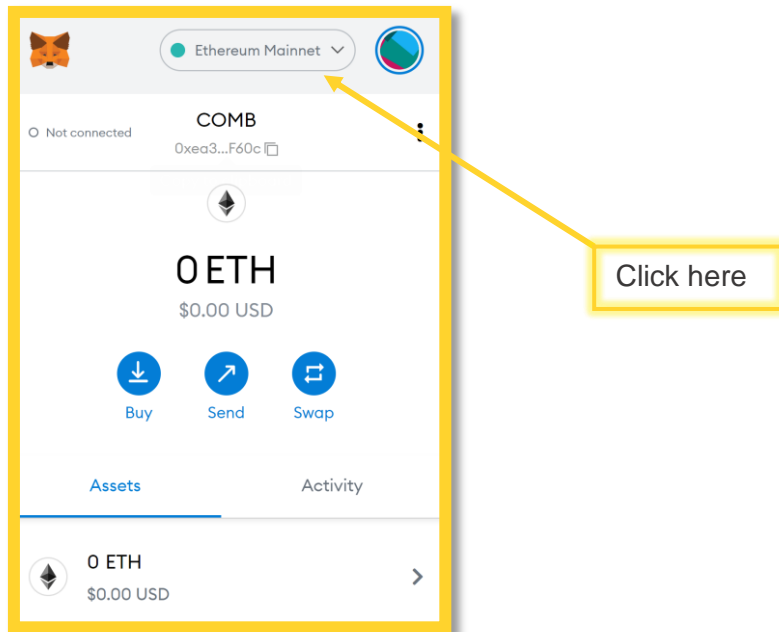

The remainder of this document walks you through the above steps in more detail. You can also click on any line above to jump directly to that step.

Note: this guide was written at a time when exchanges were not allowing FTM withdrawals, so it is assumed you will need to buy AVAX and then convert it to FTM in order to buy COMB

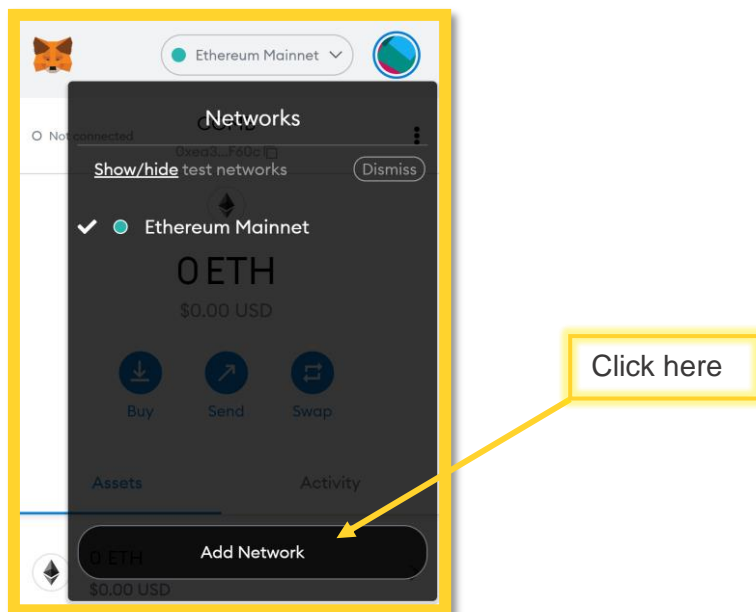

Step 1: Add Avalanche Network to your MetaMask wallet

The top line of your Metamask shows the network you are connected to.

Click on this line to display the current networks already setup for your wallet:

When the Network display appears, click the 'Add Network' option at the bottom:

A network setup screen appears for you to add the network information.

Copy and paste the following information into the boxes as shown below:

Network Name: Avalanche Network

New RPC URL: <https://api.avax.network/ext/bc/C/rpc>

ChainID: 43114

Symbol: AVAX

Explorer: <https://snowtrace.io/>

The screenshot shows a mobile application interface for adding a new network. The title bar at the top reads 'Networks > Add a network'. Below the title bar is a yellow warning box with an information icon and the text: 'A malicious network provider can lie about the state of the blockchain and record your network activity. Only add custom networks you trust.' The main form area contains five input fields arranged in two columns. The left column has 'Network Name' (with 'Avalanche Network' entered), 'Chain ID' (with '43114' entered), and 'Block Explorer URL (Optional)' (with 'https://snowtrace.io/' entered). The right column has 'New RPC URL' (with 'https://api.avax.network/ext/bc/C/rpc' entered) and 'Currency Symbol (Optional)' (with 'AVAX' entered). At the bottom of the form are two buttons: 'Cancel' and 'Save'. Two yellow callout boxes with arrows point to the form: one points to the top right of the form area with the text 'Enter values here', and the other points to the 'Save' button with the text 'Then click \'Save\''.

Networks > Add a network

Network Name

Avalanche Network

New RPC URL

<https://api.avax.network/ext/bc/C/rpc>

Chain ID

43114

Currency Symbol (Optional)

AVAX

Block Explorer URL (Optional)

<https://snowtrace.io/>

Cancel Save

Enter values here

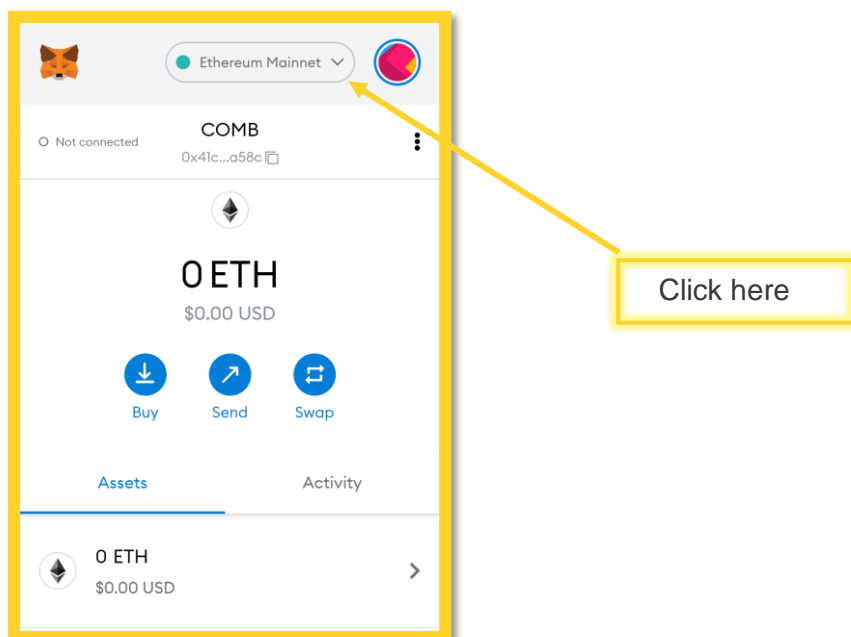

Then click 'Save'

Then click the 'Save' button to save the settings and your Avax network is ready to go.

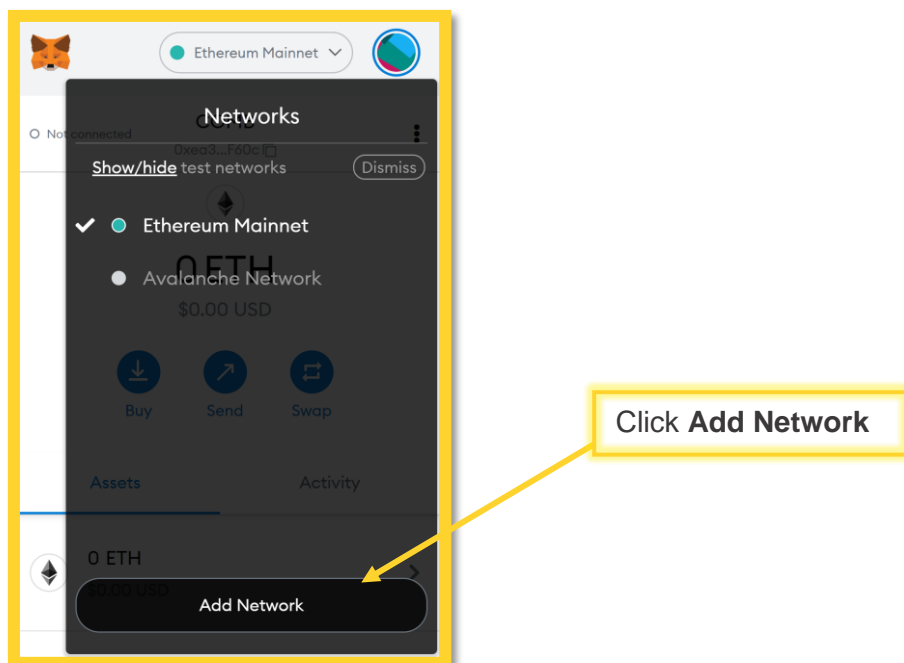

Step 2: Add Fantom Opera Network to your MetaMask wallet

The top line of your Metamask shows the network you are connected to.

Click on this line to display the current networks already setup for your wallet:

When the Network display appears, click the 'Add Network' option at the bottom:

A network setup screen appears for you to add the network information.

Copy and paste the following information into the boxes as shown below:

Network Name: Fantom Opera
New RPC URL: <https://rpc.ftm.tools/>
ChainID: 250
Symbol: FTM
Explorer: <https://ftmscan.com>

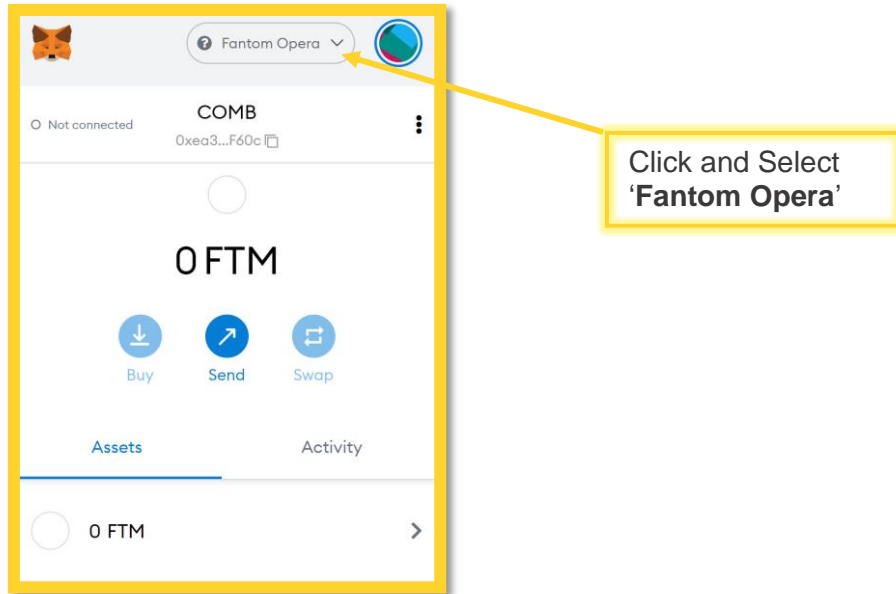

The screenshot shows a web interface titled 'Networks > Add a network'. At the top, there is a yellow warning box with an information icon and the text: 'A malicious network provider can lie about the state of the blockchain and record your network activity. Only add custom networks you trust.' Below this is a form with several input fields. The 'Network Name' field contains 'Fantom Opera'. The 'New RPC URL' field contains 'https://rpc.ftm.tools/'. The 'Chain ID' field (with an info icon) contains '250'. The 'Currency Symbol (Optional)' field contains 'FTM'. The 'Block Explorer URL (Optional)' field contains 'https://ftmscan.com'. At the bottom of the form are two buttons: 'Cancel' and 'Save'. A yellow box with the text 'Enter values here' has an arrow pointing to the 'New RPC URL' field. Another yellow box with the text 'Then click Save' has an arrow pointing to the 'Save' button.

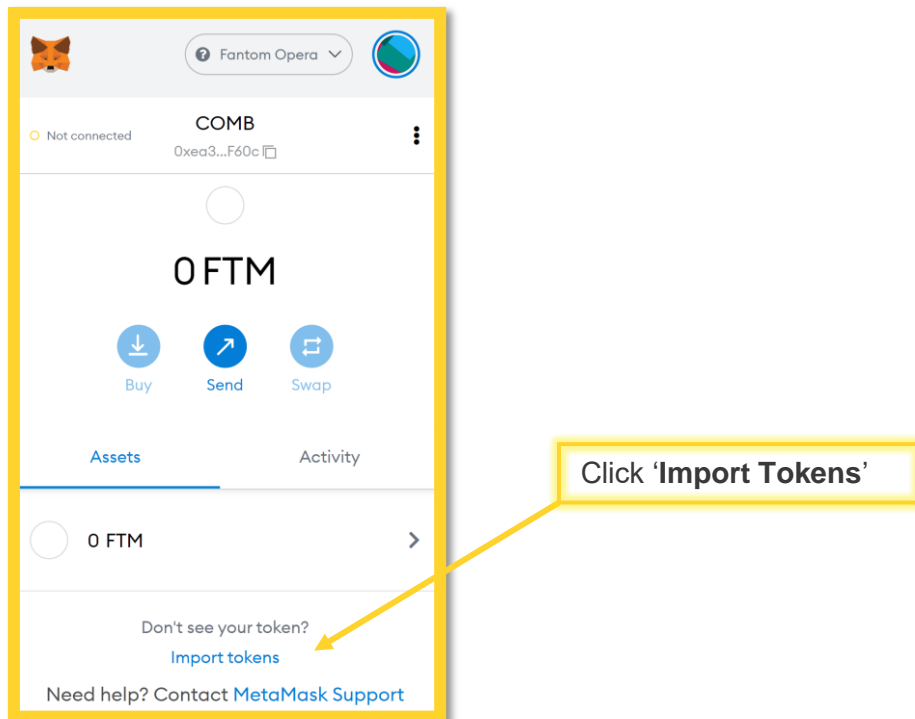

Then click the 'Save' button to save the settings and your Fantom network is ready to go.

Step 3: Add COMB token to MetaMask

Make sure your MetaMask is connected to the FTM network (previous step)

Click on Import tokens:

Copy and paste the Contract address, symbol and decimals from the text below into the screen fields as shown on the screenshot and then click **Add Custom Token**

Contract address: 0xaE45a827625116d6C0C40B5D7359EcF68F8e9AFD

Token Symbol: COMB

Decimals: 18

Import Tokens

Custom Token

Anyone can create a token, including creating fake versions of existing tokens. Learn more about [scams](#) and [security risks](#).

Token Contract Address

0xaE45a827625116d6C0C40B5D7359

Token Symbol Edit

COMB

Token Decimal

18

Add Custom Token

Enter values here

Click 'Add Custom Token'

When you see the Comb token showing as per the screen below, click the **Import Tokens** button

Import Tokens

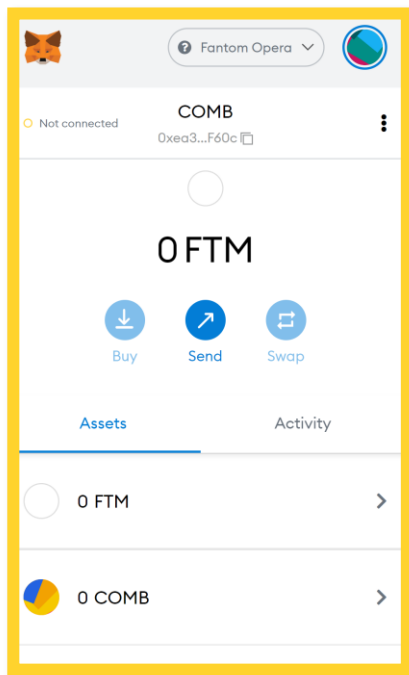

Would you like to import these tokens?

Token	Balance
 COMB	0 COMB

Back Import Tokens

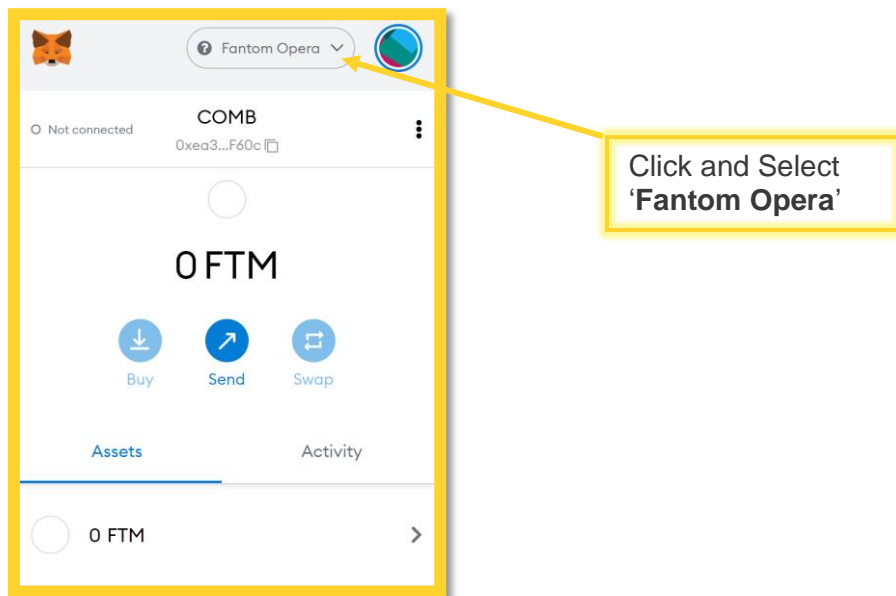

Click 'Import Tokens'

If your COMB token has added successfully, you should now see it appearing in your wallet token list with a quantity of zero:

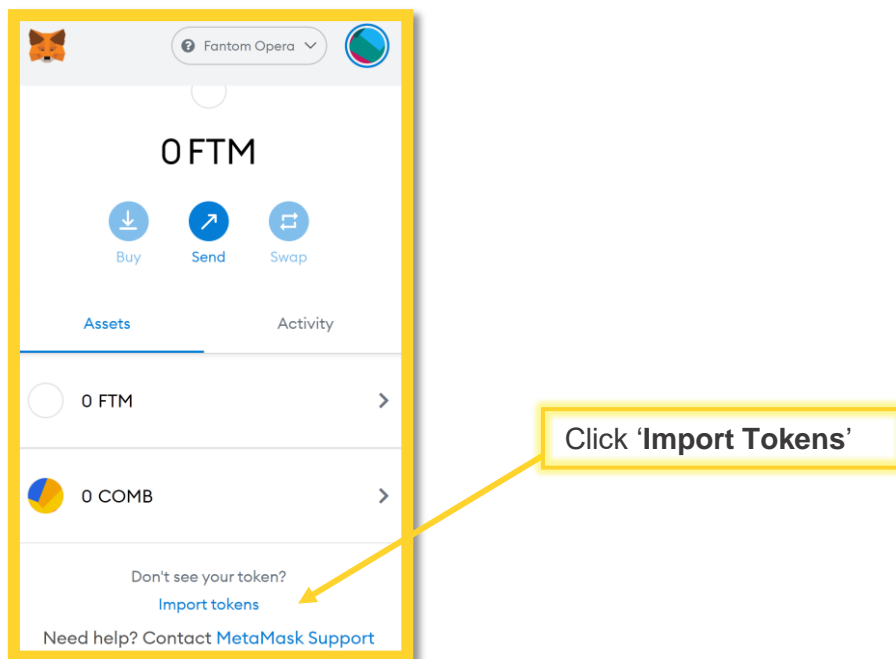

Step 4: Add AVAX coin to your Fantom Opera Network on MetaMask

Make sure your MetaMask is connected to the FTM network (previous step)

Click on Import tokens:

Copy and paste the Contract address, symbol and decimals from the text below into the screen fields as shown on the screenshot below and then click **Add Custom Token**

Contract address: 0x511d35c52a3c244e7b8bd92c0c297755fbd89212

Token Symbol: AVAX

Decimals: 18

Click 'Import Tokens'

How To Buy COMB tokens (cont'd)

If your Avax token has added successfully, you should now see it appearing in your wallet token list with a quantity of zero:

Step 5: Buy AVAX on Exchange & Send to MetaMask wallet

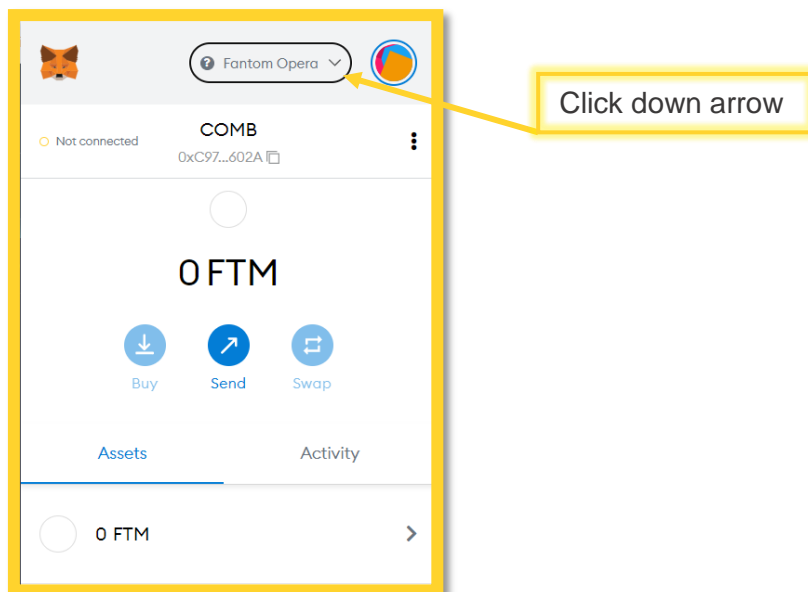

This guide assumes you already know how to buy a token on an exchange.

The most important thing to check BEFORE buying any AVAX on an exchange is to make sure it can be withdrawn using AVAX C-Chain network, not the Ethereum network (ERC-20) or you will pay excessive withdrawal (gas) fees. KuCoin is one exchange that offers withdrawals on the AVAX C-Chain and therefore is used in this example.

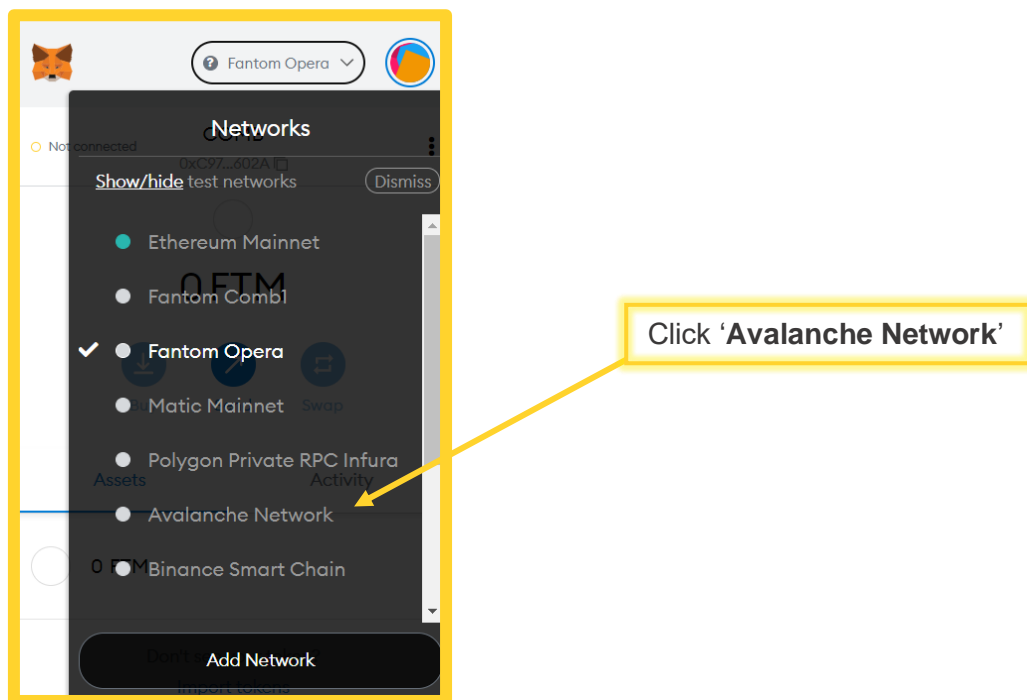

Purchase enough \$ worth of AVAX to convert to the required number of COMB you want to ultimately buy, plus a little to cover any fees (required for exchange withdrawal and bridging step 0.02 should be ample for KuCoin).

Before you commence your withdrawal, you need to change your Metamask wallet to Avalanche exchange so that you will see your AVAX arrive once your withdrawal is complete.

To do this, click the **Fantom Opera** box at the top of your Metamask screen:

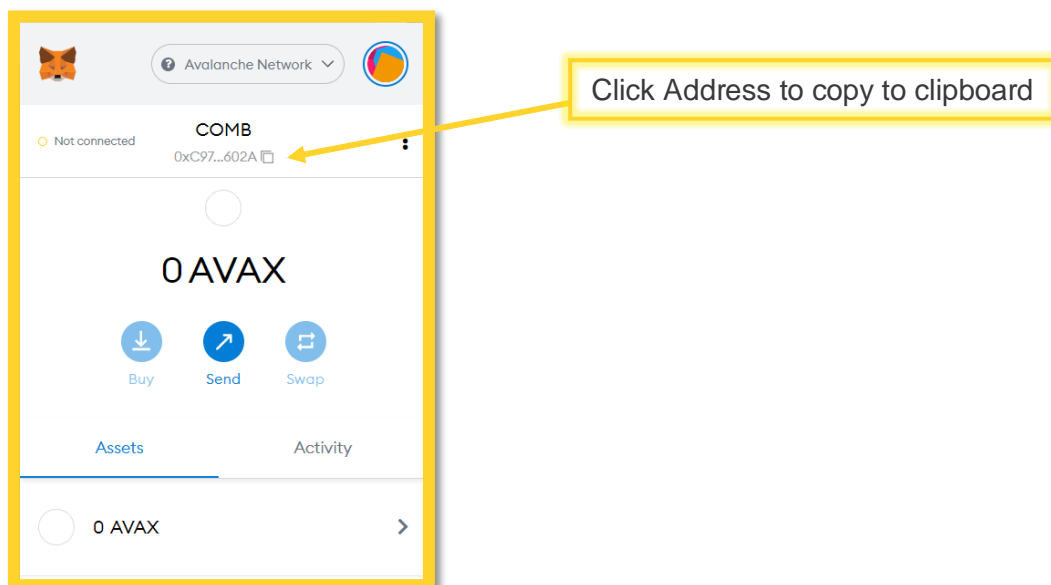

Then click the Avalanche Network from the list of network options that show up (note: you may not have as many options as shown in this example but you WILL have Avalanche if you completed Step 1 of this guide correctly):

You should see that you have 0 Avax now in your wallet and the top line shows **Avalanche Network**.

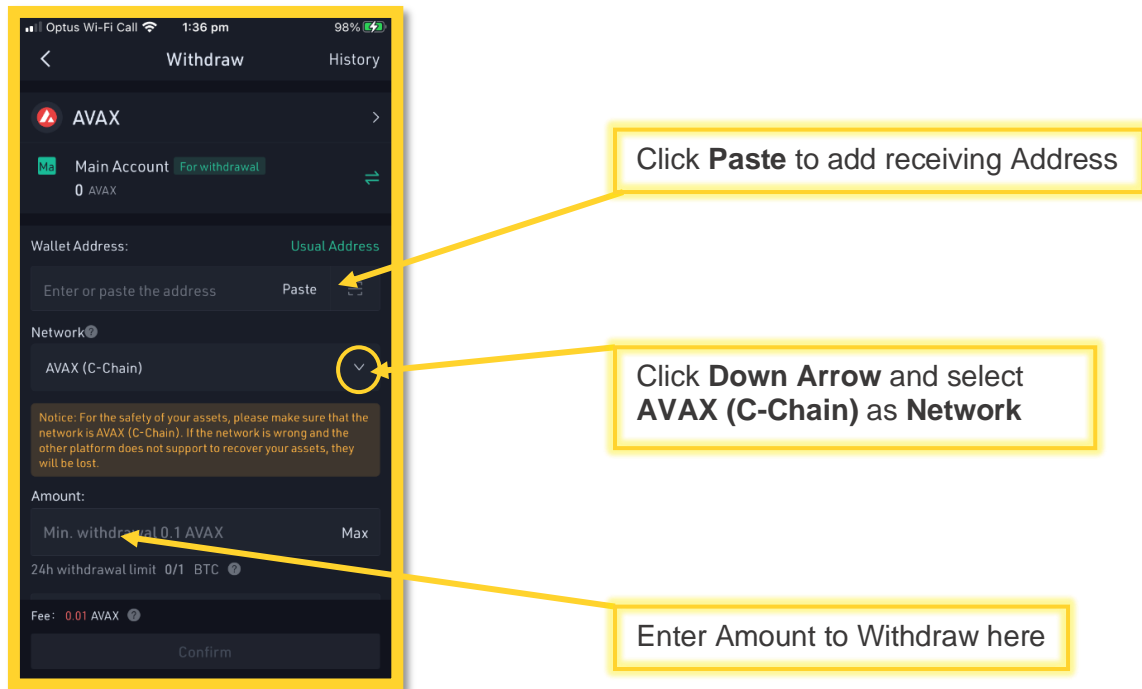

Click the address of your Metamask wallet to copy it to your clipboard (this is the address you will send your Avax to when you withdraw from the exchange):

Paste your Metamask address into the 'Wallet Address' section of the exchange withdrawal screen by clicking the Paste option.

Make sure you select the Network setting as Avax C-Chain as shown below on a KuCoin withdrawal screen below.

Select the Amount of Avax you want to withdraw, then proceed with withdrawal completing any authenticator steps that you exchange requires

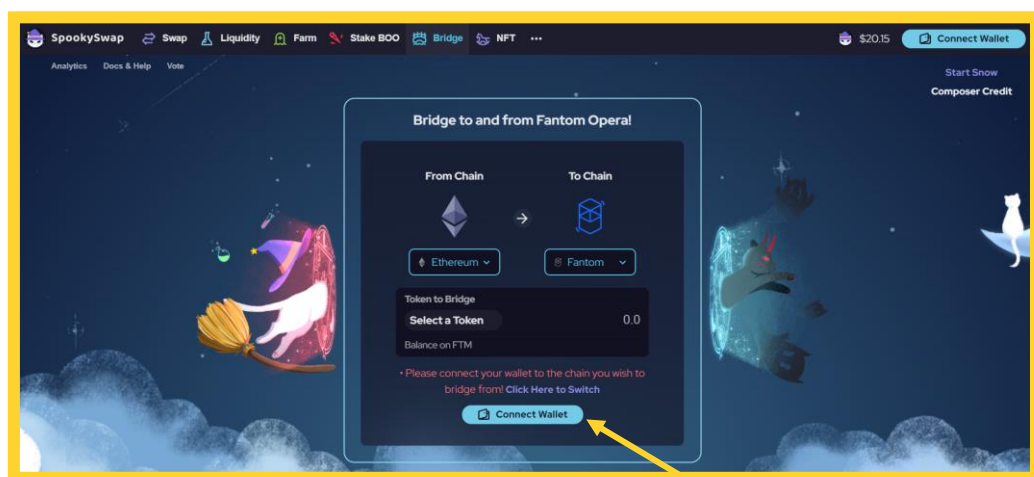

Wait for your AVAX to appear in your wallet before continuing with the next step (can take 20-30 minutes depending on network conditions)

Step 6: Bridge AVAX from Avalanche Network to Fantom Opera Network on Metamask

When you receive AVAX in your MetaMask Avalanche Network wallet, it will be on the Avalanche network because this is the 'native' network for AVAX. Bridging allows us to create 'wrapped' AVAX on the FTM network which means it can be recognised and used to swap tokens on the FTM network. To do this, we use a bridging website such as spookyswap.

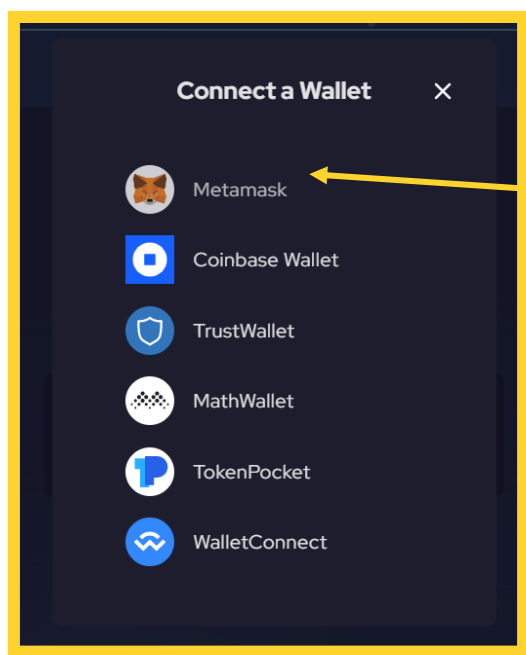

In your website browser, go to <https://spookyswap.finance/bridge>

Click **Connect Wallet** to connect the site to your wallet:

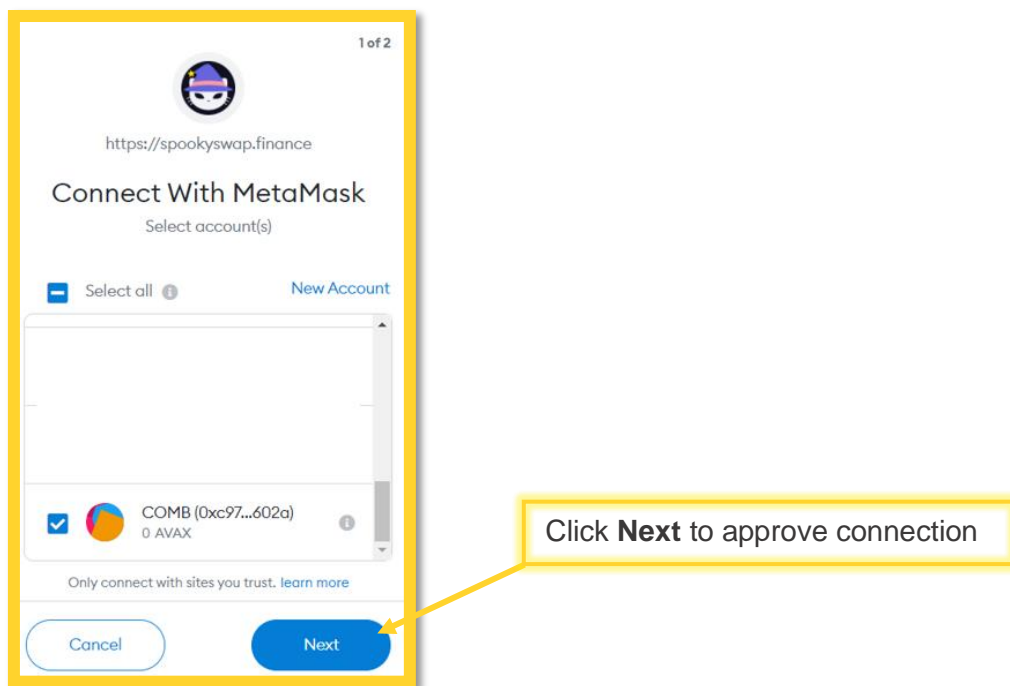

Click
Connect Wallet

Then select **Metamask** on **Connect Wallet** choices:

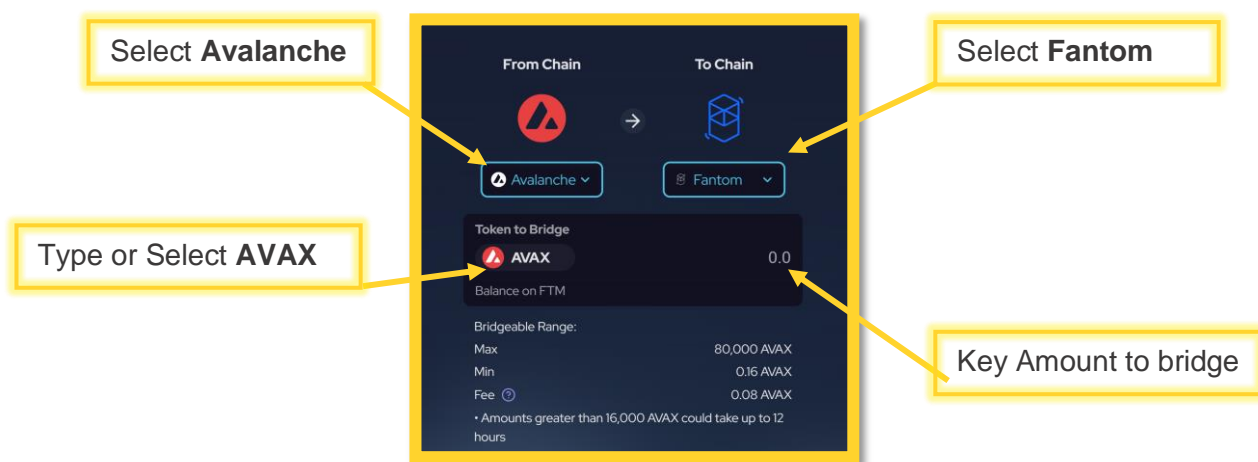

Click **Metamask**

Once you click Metamask on the previous screen, open your Metamask wallet and approve the connection by clicking Next as shown below:

On the SpookySwap window, Input the bridge information as follows (show in screenshot below):

- Select 'Avalanche' in the 'From Chain' and 'Fantom' in the 'To Chain'.
- Type or select AVAX as the Token to Bridge
- Choose the amount of AVAX (usually choose the max allowed),

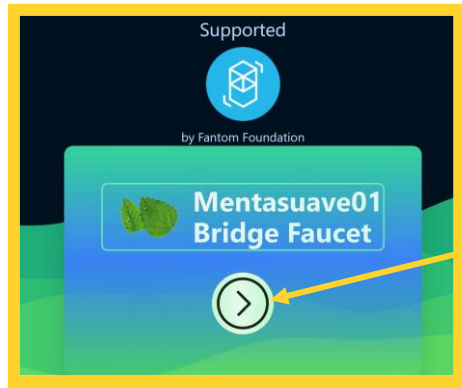

Once values are input, click **Bridge token**, and approve bridging in your wallet (on your Metamask screen).

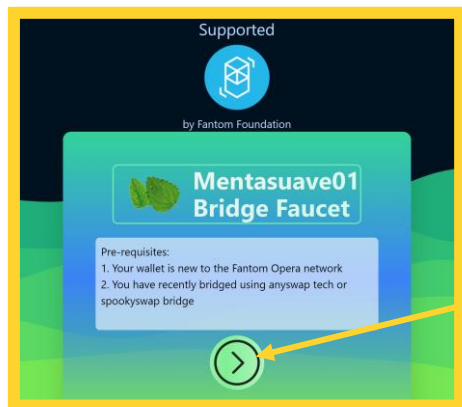

Step 7: Get some FTM for fees

You will be transacting within the Fantom network for the remaining steps. All transactions within any network require fees to be paid in that networks' native token. Therefore, we will need a small amount on Fantom (FTM) for fees before we can proceed any further. A Fantom faucet gives us small amounts of FTM for fees at no charge.

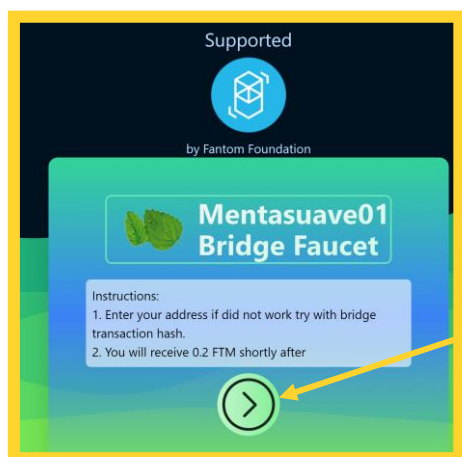

A fantom faucet can be accessed by going to <https://www.mentasuave01-tools.com/> in your browser and following the steps below:

Click the arrow

Click the arrow again to confirm you have read the pre-requisites

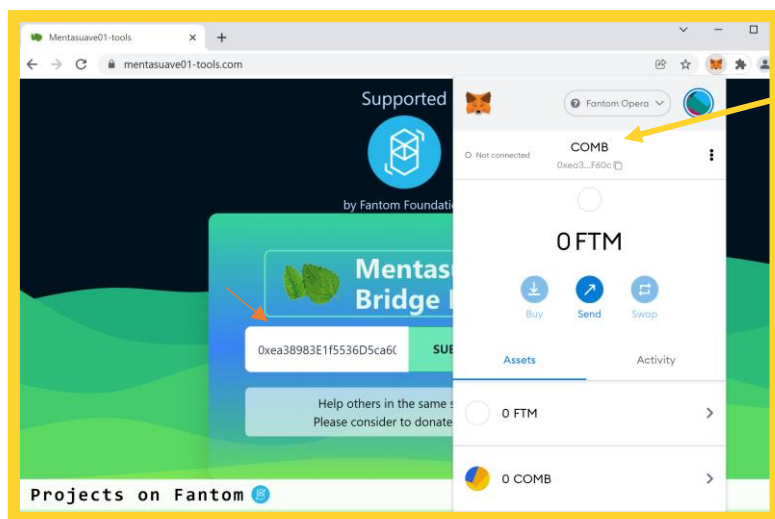

Click the arrow once more to confirm you have read the instructions

Click the arrow once more to confirm you have read the recommendation

Once it asks for your wallet, go back to your Metamask and click the “Copy” symbol to get your receiving address for the free FTM

Click to Copy address

Paste your Metamask Wallet address and click **Submit**

Copy your Metamask Wallet address here

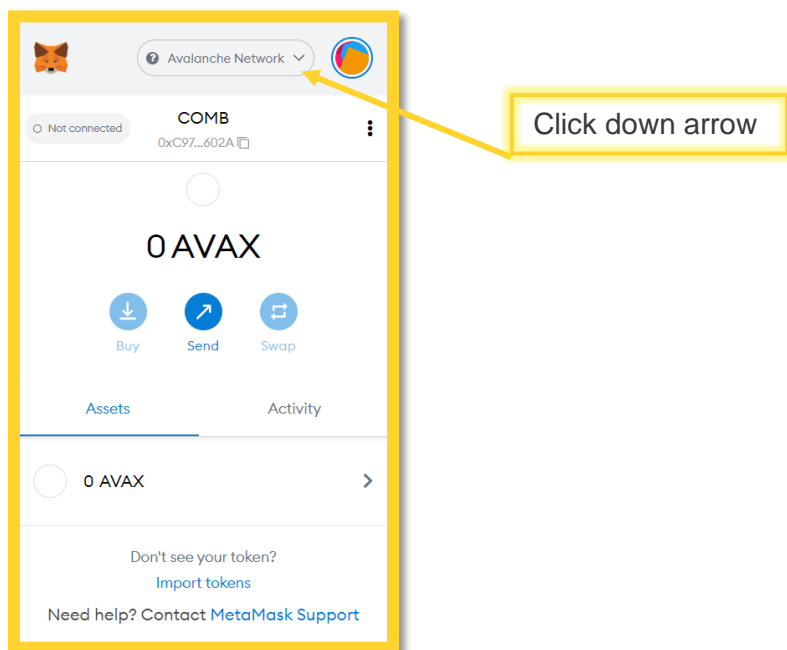

Then click **Submit**

If the faucet was successful, you will receive a message saying ‘**Bridge was successful**’

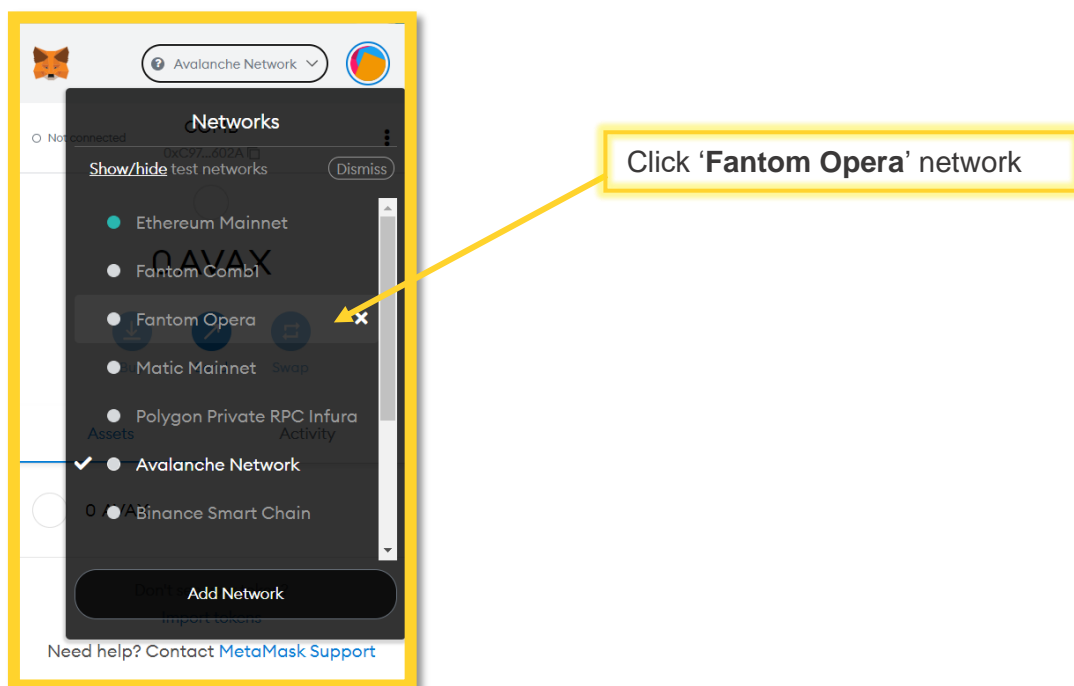

Step 8: Swap AVAX for FTM

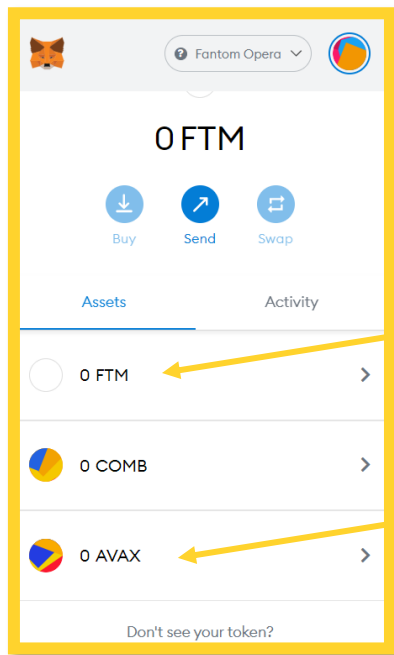

At this point, you should now have a small amount of FTM and all of your AVAX showing on the Fantom Network in your Metamask wallet.

To confirm this, change your Metamask wallet back to the Fantom Network:

Then click the Fantom Opera Network from the list of network options that show up (note: you may not have as many options as shown in this example but you WILL have Fantom Opera if you completed Step 2 of this guide correctly):

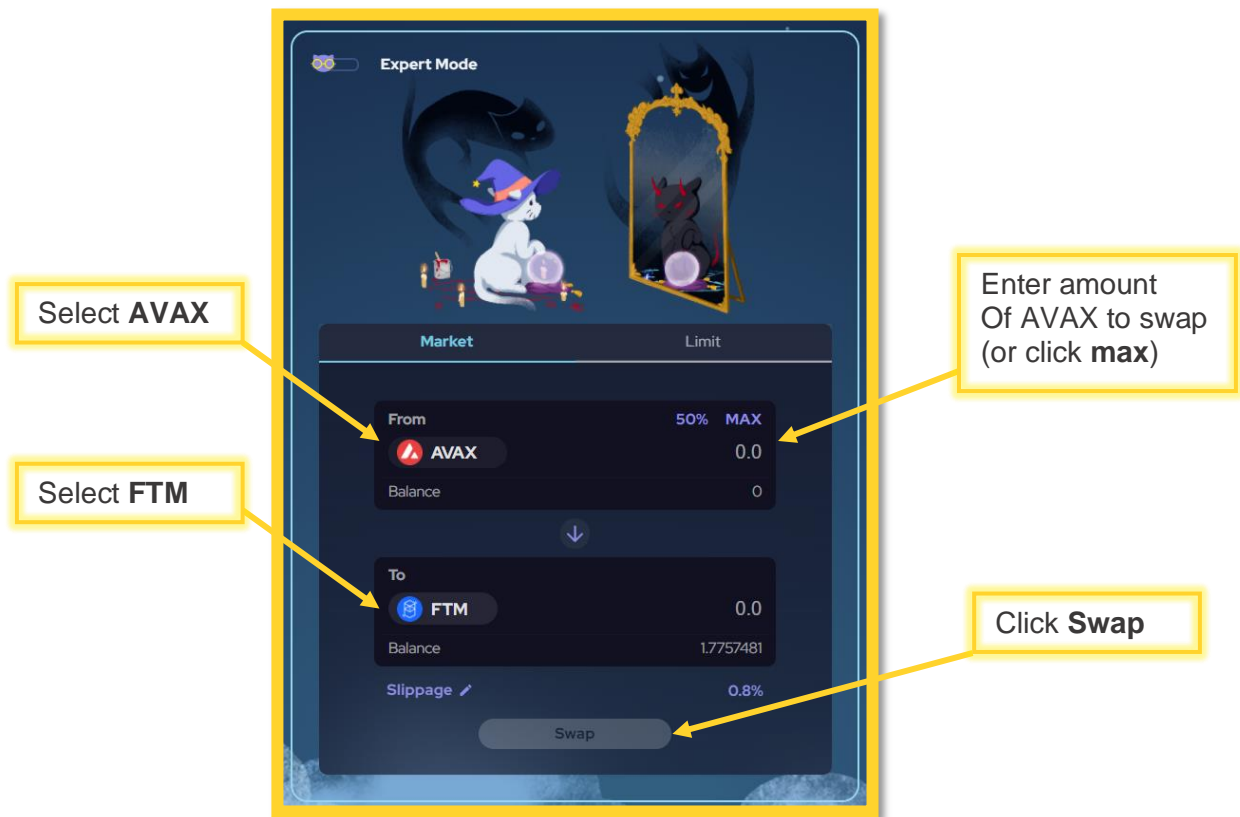

You should have a small amount of FTM (0.2 maybe)

You should have all of your bridged AVAX showing here

Once you have confirmed you have the required token amounts, go to <https://spookyswap.finance/swap> and swap AVAX for FTM

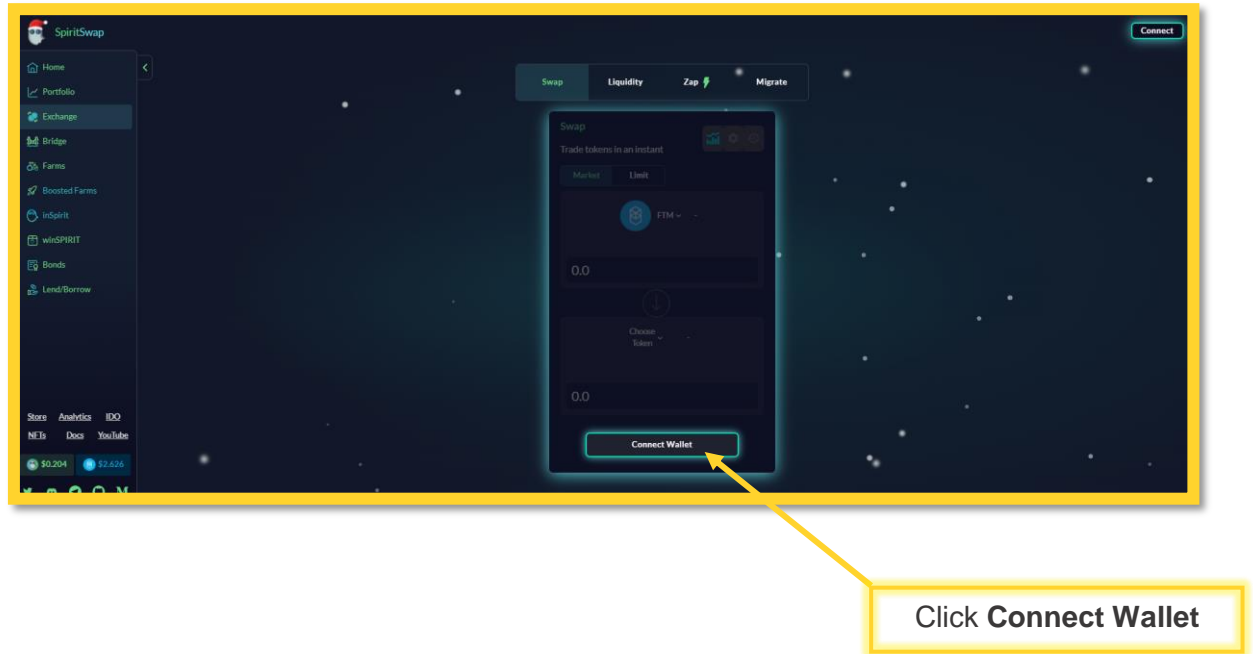

Once the above entries are made, click the **Swap** button and Approve the transaction in your Metamask wallet

Step 9: Swap FTM for COMB

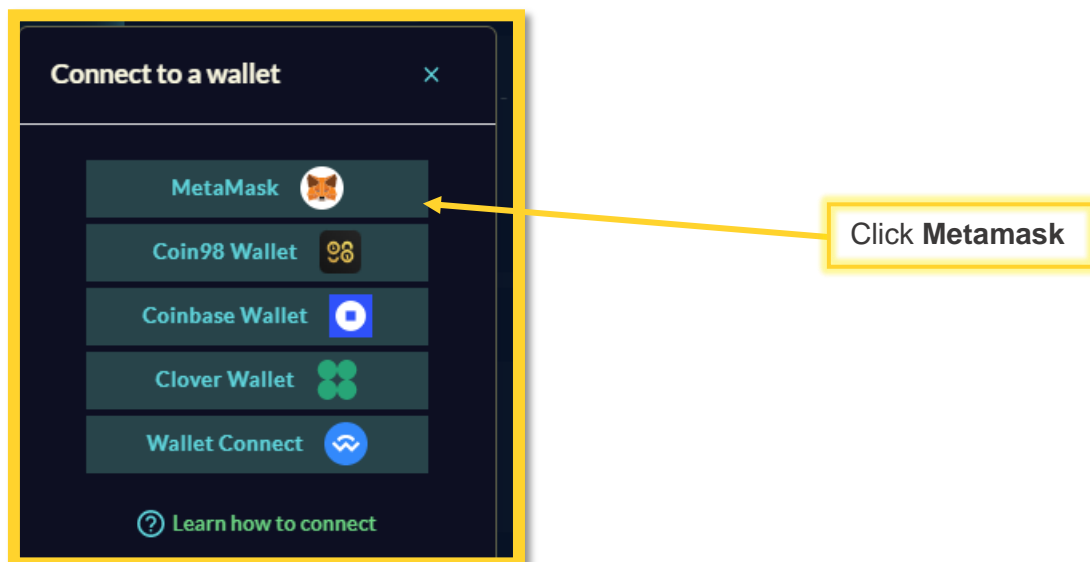

Once you receive your FTM tokens in your Metamask wallet (on Fantom Opera Network), you are finally ready to swap FTM for COMB.

In your website browser, go to <https://swap.spiritswap.finance/#/exchange/swap>

Click **Connect Wallet** to connect the site to your wallet:

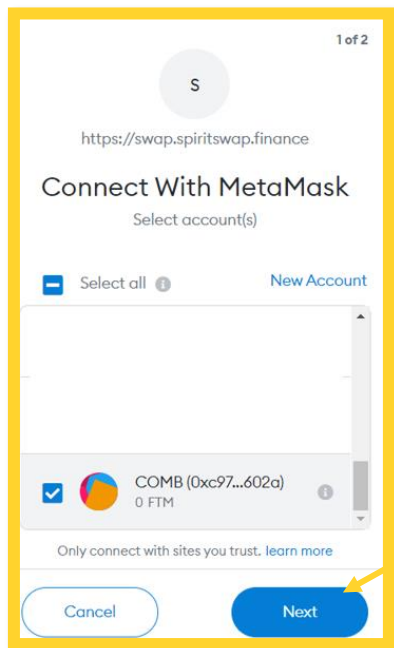

Then select **Metamask** on **Connect Wallet** choices:

How To Buy COMB tokens (cont'd)

Once you click Metamask on the previous screen, open your Metamask wallet and approve the connection by clicking Next as shown below:

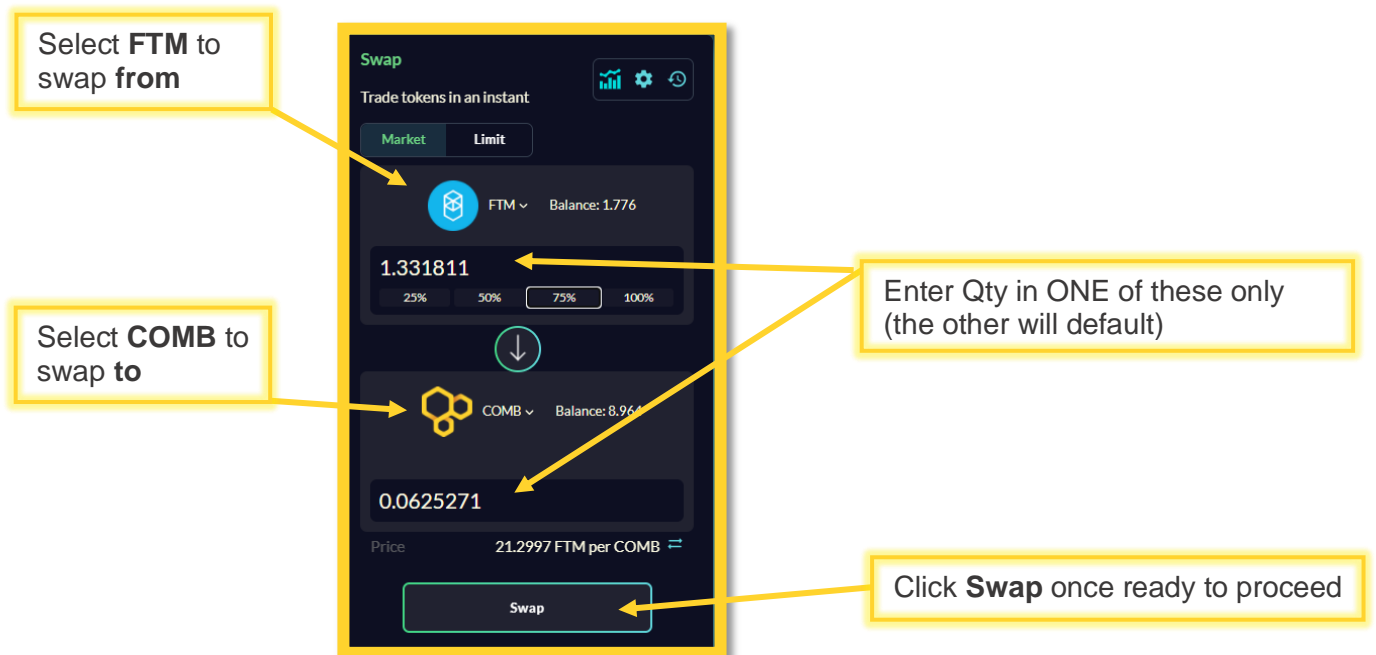

Click **Next** to approve connection

Select FTM on the left/top (token to be swapped) and COMB on the right/bottom (token you are swapping into)

Enter either the qty of COMB you want to receive, or the qty of FTM you want to exchange.

Click the Swap Button then approve in MetaMask (*NOTE: Leave a small amount of FTM in your wallet (1-2 FTM) to cover future fees*)

Congratulations!

You have successfully purchased **COMB and
are ready to setup a node!**
